how do we think about architecture historically and theoretically  
forty ways to think about architecture  
provides an introduction to some of the wide ranging ways in which architectural history and theory are being approached today  
the inspiration for this project is the work of adrian forty professor of architectural history at the bartlett school of architecture university college london ucl who has been internationally renowned as the uk's leading academic in the discipline for 40 years  
forty's many publications notably *objects of desire* 1986 *words and buildings* 2000 and *concrete and culture* 2012 have been crucial to opening up new approaches to architectural history and theory and have helped to establish entirely new areas of study  
his teaching at the bartlett has enthused a new generation about the exciting possibilities of architectural history and theory as a field  
this collection takes in a total

the resuscitation of these half dozen slightly connected essays which mr blomfield has collected from the quarterly review and the architectural review and entitled studies in architecture results in an informing book which may be perused with profit by any intelligent reader but especially by the professed student of architecture excepting the first essay it is a book mainly about architects certain architects as personalities seen through their architecture and their writings to find the man in his architecture seems according to the author to be the problem for the critic after all he says the vital interest of architecture is the human interest to this point he addresses himself aiming at recalling the fact that architecture is a difficult art not a mystery but an expression of the human intelligence capable of the same critical analysis as any other imaginative and intellectual effort for shortcomings in this endeavor he pleads the limited opportunity possible to a writer whose principal work lies elsewhere among the fifty illustrations are ten reproductions of sketches from mr blomfield s own pencil delightful in drawing and masterly in their handling some twenty more of the plates are from photographs most of them excellent for their purpose addressed with more serious intent to architects as experts in building work this book might be put into a higher category altogether for it contains lessons that need to be driven home to architects in particular and can be rightly enforced only by the authority of an architect the first essay entitled byzantium or lombardy opens with the remark that modern architecture seems incapable of progress except in a circle having exhausted our classical tradition and got over our devotion to gothic architecture we now see men transferring their studies to the obscure period of post roman architecture which preceded the art of mediaeval europe each of the various italian writers on this subject seems to have been directing his best efforts to demolishing the work of his predecessors besides being too fond of theorizing without consideration of the buildings themselves summing up so to speak before mastering the evidence a failing one might observe not rigidly confined to italian book writers on architectural history one recent writer signor rivoira with patriotic zeal propounds the theory that western architecture of the eleventh and twelfth centuries generally known as romanesque is descended in unbroken continuity through the work of italians presumably lombards at ravenna in the fifth century a d from the architects and builders of imperial rome that it was in fact the creation of italy not of byzantium as for byzantine looking features and details found at bavenna these may have been executed by greeks working for local designers

and builders a theory which appears to Mr. Blomfield entirely to miss the very real and far reaching difference between Byzantine architecture and Romanesque a diversity in kind that there is between S. Vitale and S. Apollinare Nuovo he finds in Signor Rivoira's work too little attention given to plan and construction it is here that the hand of the amateur is apparent for architecture is a difficult subject and this aspect of it can only be handled by architects and further he says to my mind the vital distinction between styles and periods in architecture is to be found not so much in details as in planning and construction in the underlying thought we do not find any such principle of classification laid down in Signor Rivoira's work in his anxiety to find the origin of mediaeval architecture in Italy he claims a single origin for the basilica plan of the western church and the totally different plan of the domed church of the East Royal Institute of British Architects Journal

The Architect as Magician explores the connection between magic and architecture there is a belief that a greater understanding of the meaning of magic provides insights about architecture and architects design processes architects influence the effects of nature through the making of their buildings in an analogous condition magicians perform rituals in an attempt to influence the forces of nature this book argues that architects could gain much by incorporating ideas from magic into their design process the book demonstrates through historical and current examples the important influence magic has had on the practice of architecture the authors explain how magic helps us to understand the way we infuse architecture with meaning and how magic affects and inspires architectural creation aimed at architects students scholars and researchers the Architect as Magician helps readers discover the ambiguous and spiritual elements in their design process
