this volume contains the combined proceedings of the second international meeting on commutative algebra and related areas simcara held from july 22 26 2019 at the universidade de são paulo são carlos brazil and the ams special session on commutative algebra held from september 14 15 2019 at the university of wisconsin madison wisconsin these two meetings celebrated the combined 150th birthday of roger and sylvia wiegand the wiegands have been a fixture in the commutative algebra community as well as the wider mathematical community for over 40 years articles in this volume cover various areas of factorization theory homological algebra ideal theory representation theory homological rigidity maximal cohen macaulay modules and the behavior of prime spectra under completion as well as some topics in related fields the volume itself bears evidence that the area of commutative algebra is a vibrant one and highlights the influence of the wiegands on generations of researchers it will be useful to researchers and graduate students

this contributed volume is a follow up to the 2013 volume of the same title published in honor of noted algebraist david eisenbud s 65th birthday it brings together the highest quality expository papers written by leaders and talented

junior mathematicians in the field of commutative algebra contributions cover a very wide range of topics including core areas in commutative algebra and also relations to algebraic geometry category theory combinatorics computational algebra homological algebra hyperplane arrangements and non commutative algebra the book aims to showcase the area and aid junior mathematicians and researchers who are new to the field in broadening their background and gaining a deeper understanding of the current research in this area exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research

this book presents a unified course in be algebras with a comprehensive introduction general theoretical basis and several examples it introduces the general theoretical basis of be algebras adopting a credible style to offer students a conceptual understanding of the subject be algebras are important tools for certain investigations in algebraic logic because they can be considered as fragments of any propositional logic containing a logical connective implication and the constant 1 which is considered as the logical value true primarily aimed at graduate and postgraduate students of mathematics it also helps researchers and mathematicians to build a strong foundation in applied abstract algebra presenting insights into some of the abstract thinking that constitutes modern abstract algebra it provides a transition from elementary topics to advanced topics in be algebras with abundant examples and exercises arranged after each section it offers readers a comprehensive easy to follow introduction to this field

despite their novelty wavelets have a tremendous impact on a number of modern scientific disciplines particularly on signal and image analysis because of their powerful underlying mathematical theory they offer exciting opportunities for the design of new multi resolution processing algorithms and effective pattern recognition systems this book provides a much needed overview of current trends in the practical application of wavelet theory it combines cutting edge research in the rapidly developing wavelet theory with ideas from practical signal and image analysis fields subjects dealt with include balanced discussions on wavelet theory and its specific application in diverse fields ranging from data compression to seismic equipment in addition the book offers insights into recent advances in emerging topics such as double density dwt multiscale bayesian estimation symmetry and locality in image representation and image fusion audience this volume will be of interest to graduate students and researchers whose work involves acoustics speech signal and image processing approximations and expansions fourier analysis and medical imaging

this book gathers selected high quality research papers presented at the sixth international congress on information and communication technology held at brunel university london on february 25 26 2021 it discusses emerging topics pertaining to information and communication technology ict for managerial applications e governance e agriculture e education and computing technologies the internet of things iot and e mining written by respected experts and researchers working on ict the book offers a valuable asset for young researchers involved in advanced studies the book is presented in four volumes
