enables researchers and professionals to leverage machine learning tools to optimize catalyst design and chemical processes
artificial intelligence in catalysis delivers a state of the art overview of artificial intelligence methodologies applied in catalysis
divided into three parts it covers the latest advancements and trends for catalyst discovery and characterization
reaction predictions and process optimization using machine learning
quantum chemistry and cheminformatics written by an international team of experts in the field with each chapter combining experimental and computational knowledge
artificial intelligence in catalysis includes information on artificial intelligence techniques for chemical reaction monitoring and structural analysis
application of artificial neural networks in the analysis of electron microscopy data
construction of training datasets for chemical reactivity prediction through computational means
catalyst optimization and discovery using machine learning models
predicting selectivity in asymmetric catalysis with machine learning
artificial intelligence in catalysis is a practical guide for researchers in

academia and industry interested in developing new catalysts improving organic synthesis and minimizing waste and energy use
