transcription regulation is a complex process that can be considered and investigated from different perspectives traditionally and due to technical reasons including the evolution of our understanding of the underlying processes the main focus of the research was made on the regulation of expression through transcription factors tfs the proteins directly binding to dna on the other hand intensive research is going on in the field of chromatin structure remodeling and its involvement in the regulation whatever direction we select we can speak about several levels of regulation for instance concentrating on tfs we should consider multiple regulatory layers starting with signaling pathways and ending up with the tf binding sites in the promoters and other regulatory regions however it is obvious that the tf regulation also including the upstream processes represents a modest portion of all processes leading to gene expression for more comprehensive description of the gene regulation we need a systematic and holistic view which brings us to the importance of systems biology approaches advances in methodology especially in high throughput methods result in an ever growing mass of data which in many cases is still waiting for appropriate consideration moreover the accumulation of data is going faster than the development of algorithms for their systematic evaluation data and methods integration is indispensable for the acquiring a systematic as well as a systemic view in addition to the huge amount of molecular or genetic components of a biological system the even larger number of their interactions constitutes the enormous complexity of processes occurring in a living

cell organ organism in systems biology these interactions are represented by networks transcriptional or more generally gene regulatory networks are being generated from experimental chipseq data by reverse engineering from transcriptomics data or from computational predictions of transcription factor tf target gene relations while transcriptional networks are now available for many biological systems mathematical models to simulate their dynamic behavior have been successfully developed for metabolic and to some extent for signaling networks but relatively rarely for gene regulatory networks systems biology approaches provide new perspectives that raise new questions some of them address methodological problems others arise from the newly obtained understanding of the data these open questions and problems are also a subject of this research topic

using 60 tables and 60 figures this report depicts vocational education in the united states as it has evolved over two decades 1969 to 1990 the report examines patterns of program participation selected student outcomes and the characteristics of teachers in both secondary and postsecondary vocational education it also provides some information on the academic curriculum most of the information is presented for single points in time but some time series data are also reported data for the report were taken from many of the large national data systems supported by the national center for education statistics a few highlights of the report are the following 1 in the high school senior class of 1987 98 percent of all public high school graduates completed at least one course in vocational education during the high school years with 90 percent of those students taking courses preparing them for specific occupations 2 students with disabilities were more likely than students without disabilities to be heavy concentrators in vocational education 3 about 62 percent of students in 1982 attended at least one postsecondary institution in 1984 3 the number of high school seniors taking vocational courses

in 1980 was 11 percent higher than the number taking such courses in 1972 4 vocational and nonvocational teachers tended to have similar characteristics and 5 about 6 percent of the united states population of 18 to 34 year olds was enrolled in postsecondary vocational courses in 1990 the report contains a glossary and appendixes with 60 tables of standard errors for the tables and data sources and technical notes kc

based on data drawn from seven surveys conducted by the national center for education statistics and two conducted by other organizations covers the period from 1991 to 1992 and reviews trends from 1982 to 1992
