this book addresses the problems of identifying human actions behind finds of bones in settlement archaeology exemplified with the identification of ritual deposits in order to

formulate a methodological framework for approaching the identification of ritual deposits different methods are tested on four early medieval case studysites dongjum and leeuwarden two artificial dwelling mounds situated in the then undiked salt marches of the northern netherlands midlaren an inland settlement in drenthe also in the northern netherlands and finally uppåkra a central place in the south of sweden the bone fragments from the four materials are studied in a five step process of definition description identification interpretation and explanation the deposits are discussed with the help of various archaeological ethnographic and historical sources the results of the analysis lead to a methodological framework for understanding individual deposits based on a holistic perspective where all information is regarded as potentially valuable various methods are taken into consideration and simplification is avoided

volume 9 features an overview of mechanisms controlling differentiation and morphogenesis of bone especially in craniofacial mesenchyme an examination of the important role played by homeobox genes in patterning the skeleton a look at how membrane bones repair themselves a review and analysis of the mechanisms underlying the developmental integration of skeleton and muscles and their role in important future advances in the field an emphasis on fuctional integration an in depth discussion of gene control
