now in its 6th edition the authoritative textbook applied multivariate statistics for the social sciences continues to provide advanced students with a practical and conceptual understanding of statistical procedures through examples and data sets from actual research studies with the added expertise of co author keenan pituch university of texas austin this 6th edition retains many key features of the previous editions including its breadth and depth of coverage a review chapter on matrix algebra applied coverage of manova and emphasis on statistical power in this new edition the authors continue to provide practical guidelines for checking the data assessing assumptions interpreting and reporting the results to help students analyze data from their own research confidently and professionally features new to this edition include new chapter on logistic regression ch 11 that helps readers understand and use this very flexible

and widely used procedure new chapter on multivariate multilevel modeling ch 14 that helps readers understand the benefits of this newer procedure and how it can be used in conventional and multilevel settings new example results section write ups that illustrate how results should be presented in research papers and journal articles new coverage of missing data ch 1 to help students understand and address problems associated with incomplete data completely re written chapters on exploratory factor analysis ch 9 hierarchical linear modeling ch 13 and structural equation modeling ch 16 with increased focus on understanding models and interpreting results new analysis summaries inclusion of more syntax explanations and reduction in the number of spss sas dialogue boxes to guide students through data analysis in a more streamlined and direct approach updated syntax to reflect newest versions of ibm spss 21 sas 9.3 a free online resources site at routledge.com/9780415836661 with data sets and syntax from the text additional data sets and instructor's resources including powerpoint lecture slides for select chapters a conversion guide for 5th edition adopters and answers to exercises ideal for advanced graduate level courses in education psychology and other social sciences in which multivariate statistics advanced statistics or quantitative techniques courses are taught this book also appeals to practicing researchers as a valuable reference pre requisites include a course on factorial anova and covariance however a working knowledge of matrix algebra is not assumed

trying to determine when to use a logistic regression and how to interpret the coefficients frustrated by the technical writing in other books on the topic pampel's book offers readers the first nuts and bolts approach to doing logistic regression through the use of careful explanations and worked out examples pampel first offers readers a review of some basic concepts such as exponents percentage change and likelihood functions next he describes in some detail how taking the log of the odds eliminates the floor so that the transformation of logistic regression coefficients into coefficients that effect odds and probabilities makes more sense to readers and third he describes maximum likelihood estimation through words and simple samples along side of the formulas so as to make the concept more concrete and the procedure easier to comprehend throughout the book he emphasizes examples explanations and how to interpret the results of each procedure this book will enable readers to use and understand logistic regression techniques and will serve as a foundation for more advanced treatments of the topic learn more about the little green book qass series [click here](#)

statistics for lawyers presents the science of statistics in action at the cutting edge of legal problems a series of more than 90 case studies drawn principally from actual litigation have been selected to illustrate important areas of the law in which statistics has played a role and to demonstrate a variety of statistical tools some case studies raise legal issues that are

being intensely debated and lie at the edge of the law of particular note are problems involving toxic torts employment discrimination stock market manipulation paternity tax legislation and drug testing the case studies are presented in the form of legal statistical puzzles to challenge the reader and focus discussion on the legal implications of statistical findings the techniques range from simple averaging for the estimation of thefts from parking meters to complex logistic regression models for the demonstration of discrimination in the death penalty excerpts of data allow the reader to compute statistical results and an appendix contains the authors calculations

featuring a practical approach with numerous examples this book focuses on helping the reader develop a conceptual rather than technical understanding of categorical methods making it a much more accessible text than others on the market the authors cover common categorical analyses and emphasize specific research questions that can be addressed by each analytic procedure so that readers are able to address the research questions they wish to answer to achieve this goal the authors review the theoretical implications and assumptions underlying each of the procedures present each concept in general terms and illustrate each with a practical example demonstrate the analyses using spss and sas and show the interpretation of the results provided by these programs a look ahead section at the beginning of each chapter provides an overview of the material covered so that the reader knows what to expect this is followed by one or more research questions that can be addressed using the procedure s covered in the chapter a theoretical presentation of the material is provided and illustrated using realistic examples from the behavioral and social sciences to further enhance accessibility the new procedures introduced in the book are explicitly related to analytic procedures covered in earlier statistics courses such as anova and linear regression throughout each chapter the authors use practical examples to demonstrate how to obtain and interpret statistical output in both spss and sas their emphasis on the relationship between the initial research question the use of the software to carry out the analysis and the interpretation of the output as it relates to the initial research question allows readers to easily apply the material to their own research the data sets for executing chapter examples using sas version 9 1 3 and or ibm spss version 18 are available on a book specific web site these data sets and syntax allow readers to quickly run the programs and obtain the appropriate output the book also includes both conceptual and analytic end of chapter exercises to assist instructors and students in evaluating the understanding of the material covered in each chapter this book covers the most commonly used categorical data analysis procedures it is written for those without an extensive mathematical background and is ideal for graduate courses in categorical data analysis or cross classified data analysis taught in departments of psychology human development family studies sociology education and business researchers in these disciplines interested in

applying these procedures to their own research will appreciate this book's accessible approach

Multivariate designs were once the province of the very few exalted researchers who understood the underlying advanced mathematics. Today, through the sophistication of statistical software packages such as SPSS, virtually all graduate students across the social and behavioural sciences are exposed to the complex multivariate statistical techniques without having to learn the mathematical computations needed to acquire the data. Output these students in psychology, education, political science, etc. will never be statisticians and appropriately so. Their preparation and coursework reflects less of an emphasis on the mathematical complexities of multivariate statistics and more on the analysis and the interpretation of the methods themselves and the actual data output. This book provides full coverage of the wide range of multivariate topics in a conceptual rather than mathematical approach. The author gears toward the needs level of sophistication and interest in multivariate methodology of students in applied areas that need to focus on design and interpretation rather than the intricacies of specific computations. The book includes coverage of the most widely used multivariate designs: multiple regression, exploratory factor analysis, MANOVA, and structural equation modeling. Integrated SPSS examples for hands-on learning from one large study for consistency of application throughout the text. Examples of written results to enable students to learn how the results of these procedures are communicated. Practical application of the techniques using contemporary studies that will resonate with students.

Millman's close-up of three gamblers in Las Vegas to bet on the 1999 college basketball final four playoffs provides a harrowing view of gambling addiction. Even as he relates the concern of the gamblers and their bookmakers that their way of life is being threatened as Las Vegas becomes more family-friendly, Millman is an associate editor at ESPN. The Magazine, C. Book News, Inc.

The unlikely worlds of sports fans and statisticians collide in this interesting and accessible collection of previously published articles on the use of statistics to analyze sports, which the editors have thoughtfully culled from a variety of American Statistical Association (ASA) publications heavily weighted in the areas of competition, rating players and teams, evaluating strategies for victory. The articles vary in mathematical complexity but most will be accessible to readers with a general knowledge of statistics. Newly written material from the editors and other notable contributors introduces each section of the book, and a chapter with suggestions on using the articles in the classroom is included. Organized by sport to make it easy for readers to find the papers in their particular areas of interest, this anthology of statistics in sports contains separate sections devoted to the major North American team sports of baseball, football, basketball, and ice hockey. Two additional sections cover miscellaneous sports and more general issues.

related to sports and statistics this book grew from the efforts of members of the asa section on statistics in sports which is dedicated to promoting high professional standards in the application of statistics to sports and fostering statistical education in sports
