psychologists studying cognitive processes and personality have increasingly benefited from the wealth of theory methodology and decision making paradigms used in economics and game theory similarly for the economists personality traits and basic cognitive processes offer a set of coherent explanatory constructs in economic behavior given the debate on preference invariance and behavioral consistency across contexts and domains the papers in this topic shed light on the existence and effect of stable sets of idiosyncratic features on economic decision making while the effects of personality and cognition on economic decisions remain under explored the papers contributed in this topic offer more than a stimulus for further research the general message could be that personality and cognitive processes offer the stable idiosyncratic ground on which individual decisions are made

the social sciences study knowing subjects and their interactions a cog nitive turn based on cognitive science has the potential to enrich these sciences considerably cognitive economics belongs within this movement of the social sciences it aims to take into account the cognitive processes of individuals in economic theory both on the level of the agent and on the level of their dynamic interactions and the resulting collective phenomena this is an ambitious research programme that aims to link two levels of com plexity the level of cognitive phenomena as studied and tested by cognitive science and the level of collective phenomena produced by the economic in teractions between agents such an objective requires cooperation not only between economists and cognitive scientists but also with mathematicians physicists and computer scientists in order to renew study and simulate models of dynamical systems involving economic agents and their cognitive mechanisms the hard core of classical economics is the general equilibrium theory based on the optimising rationality of the agent and on static concepts of equilibrium following a point of view systemised in the framework of game theory the agent is considered rational if everything takes place as if he was maximising a function representing his preferences his utility function

what is economics missing link recent economic crises have had a devastating impact on society worryingly they gravely risked a collapse of the financial system these crises also painfully revealed economics blind spots crucially economics is not an innocent bystander but central to the problem in this pioneering book patrick schotanus explains that economics mechanical worldview is the ontological error which leads to flawed thinking and faulty practices the market mind hypothesis mmh thus calls it mechanical economics it not only erroneously views but also dangerously treats the economy as a machine the market as an automaton and its agents as robots inspired by heterodox economic and leading cognitive thinkers this book offers an alternative paradigm central to mmh s psychophysical worldview is the fact that consumers investors and other participants are conscious beings and that their minds extension makes consciousness a reality in markets exemplified by

market mood specifically denial of the complex mind matter exchanges as the essence of markets means the extended mind body problem is economics elephant in the room the book argues that if mechanical economics is the answer we have been asking the wrong questions moreover we will not solve our economic predicaments by doubling down on the assumption of rationality nor by identifying yet another behavioural bias instead scholars and students of economics and finance as well as finance practitioners need to investigate through cognitive economics the deep links between markets and minds to better understand both with a foreword by investment strategist russell napier an intermezzo by neuroscientist and complexity pioneer scott kelso and an afterword by 4e cognition philosopher julian kiverstein
