many of the distinctive and useful phenomena of soft matter come from its interaction with interfaces examples are the peeling of a strip of adhesive tape the coating of a surface the curling of a fiber via capillary forces or the collapse of a porous sponge these interfacial phenomena are distinct from the intrinsic behavior of a soft material like a gel or a microemulsion yet many forms of interfacial phenomena can be understood via common principles valid for many forms of soft matter our goal in organizing this school was to give students a grasp of these common principles and their many ramifications and possibilities the les houches summer school comprised over fifty 90 minute lectures over four weeks four lecture courses by howard stone michael cates david nelson and l mahadevan served as an anchor for the program a number of shorter courses and seminars rounded out the school this volume collects the lecture notes of the school

this book is a collation of the contributions presented at a major conference on isolated neutron stars held in london in april 2006 forty years after the discovery of radio pulsars it presents an up to date description of the new vision of isolated neutron stars that has emerged in recent years the great variety of isolated neutron stars from pulsars to magnetars is well covered by descriptions of recent observational results and presentations of the latest theoretical interpretation of these data
