the struggle to perform well is universal but nowhere is this drive to do better more important than in medicine in his new book atul gawande explores how doctors strive to close the gap between best intentions and best performance in the face of obstacles that sometimes seem insurmountable his vivid stories take us to battlefield surgical tents

in Iraq to a polio outbreak in India and to malpractice courtrooms around the country he discusses the ethical dilemmas of doctors' participation in lethal injections, examines the influence of money on modern medicine and recounts the astoundingly contentious history of hand washing. Finally, he gives a brutally honest insight into life as a practising surgeon. Unflinching but compassionate, Gawande's investigation into medical professionals and their progression from good to great provides a detailed blueprint for success that can be used by everyone.

Empirical evaluation techniques in computer vision presents methods that allow comparative assessment of algorithms and the accompanying benefits. Places computer vision on solid experimental and scientific grounds, assists the development of engineering solutions to practical problems, allows accurate assessments of computer vision research, provides convincing evidence that computer vision research results in practical solutions. The chapters in this volume cover the three main paradigms for evaluating computer vision algorithms: the paradigms are 1. evaluations that are independently administered, 2. evaluation of a set of algorithms by one research group, and 3. evaluation methods that feature ground truthing procedures as a major component.
