can i contribute to science do i like to work on the problems of science how do scientists know what they know would i like to be become a scientist these are questions that interest new science students the authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning they argue that students are typically taught from a disciplinary perspective of science using this lens students are viewed as people who need to learn a particular canon of information methods and ways of knowing about the world a perspective that may be useful for practicing scientists but not ideal for young learners in this disciplinary approach to science education there is little room for development as a scientist in contrast the approach championed by kirch and amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity the historical explorations theoretical insights and practical advice presented here are appropriate for all ages and educational settings in being and becoming scientists today the authors provide new tools for thinking about science ideas for how to reveal the multiple stories of knowledge production to learners and approaches to teaching science as a collective process rather than a series of contributions made by famous individuals in these ways the authors promote the idea that all science learners contribute to the science in our lives
