che animale è un homo sapiens cosa lo distingue dagli altri la libertà oppure questa è un'illusione sono domande che ci poniamo da secoli su libero arbitrio e predestinazione si è consumata la frattura tra cattolicesimo e riforma di uomo macchina e determinismo ha

discusso la filosofia tra il seicento e l'ottocento poi è arrivato darwin con la sua pericolosa idea dell'evoluzione nel novecento tutto è sembrato dipendere dai geni i progressi delle neuroscienze hanno spostato l'indagine all'interno del cervello edoardo boncinelli e giulio gioiello fanno il punto sullo stato attuale della ricerca e analizzano i limiti teologici fisici etici e biologici che condizionano l'individuo il risultato è una nuova concezione di libertà non più un dono dato per scontato ma un processo strettamente legato alle nostre azioni l'uomo costruisce la sua libertà giorno dopo giorno e poco importa se agisce contro dio e la natura o se accetta le loro regole perché alla fine non siamo altro che il prodotto delle nostre scelte

there have been extraordinary developments in the field of neuroscience in recent years sparking a number of discussions within the legal field this book studies the various interactions between neuroscience and the world of law and explores how neuroscientific findings could affect some fundamental legal categories and how the law should be implemented in such cases the book is divided into three main parts starting with a general overview of the convergence of neuroscience and law the first part outlines the importance of their continuous interaction the challenges that neuroscience poses for the concepts of free will and responsibility and the peculiar characteristics of a new cognitive liberty in turn the second part addresses the phenomenon of cognitive and moral enhancement as well as the uses of neurotechnology and their impacts on health self determination and the concept of being human the third and last part investigates the use of neuroscientific findings in both criminal and civil cases and seeks to determine whether they can provide valuable evidence and facilitate the assessment of personal responsibility helping to resolve cases the book is the result of an interdisciplinary dialogue involving jurists philosophers neuroscientists forensic medicine specialists and scholars in the humanities further it is intended for a broad readership interested in understanding the impacts of scientific and technological developments on people's lives and on our social systems

this book offers a study of the three evolutions in a circle cosmos life and knowledge with the aim of discussing human social behavior a metaphor of the general behavior of nature from which man derives within the fluctuating equilibrium between the opposite tendencies to cohesion and shredding a circularity revealing an indefinite and probably never conclusive run up of human beings to the knowledge of

nature an analysis that demonstrates any theoretical practical impossibility to formulate absolute certainties since it depicts a situation in which man finds himself hovering between a rational way of living and the contradictory *modus operandi* of mythos all that within a society where the powerful communication and transportation technologies give rise to conflicts and fragmentations where anyone's will to self distinguishing is enhanced by highlighting any small difference and obscuring any large similarity the main difference between this book and existing ones stems from its interdisciplinary nature particularly because it establishes a close connection between three apparently so different disciplines cosmology life sciences and sociology compared with respect to their increasing complexity laws giving rise to always more chaotic configurations
