and its conclusions will surprise even those within the movement itself

pleasure of imagination i a geologist have illdefined notion of land covered with ocean former animals slow force cracking surface c truly poetical from charles darwin s notebook m 1838 the early nineteenth century was a golden age for the study of geology new discoveries in the field were greeted with the same enthusiasm reserved today for advances in the biomedical sciences in her long awaited account of charles darwin s intellectual development sandra herbert focuses on his geological training research and thought asking both how geology influenced darwin and how darwin influenced the science elegantly written extensively illustrated and informed by the author s prodigious research in darwin s papers and in the nineteenth century history of earth sciences charles darwin geologist provides a fresh perspective on the life and accomplishments of this exemplary thinker as herbert reveals darwin s great ambition as a young scientist one he only partially realized was to create a simple geology based on movements of the earth s crust only one part of his scheme has survived in close to the form in which he imagined it a theory explaining the structure and distribution of coral reefs darwin collected geological specimens and took extensive notes on geology during all of his travels his grand adventure as a geologist took place during the circumnavigation of the earth by h m s beagle 1831 1836 the same voyage that informed his magnum opus on the origin of species upon his return to england it was his geological findings that first excited scientific and public opinion geologists including darwin s former teachers proved a receptive audience the british government sponsored publication of his research and the general public welcomed his discoveries about the earth s crust because of ill health darwin s years as a geological traveler ended much too soon his last major geological fieldwork took place in wales when he was only thirty three however the experience had been transformative the methods and hypotheses of victorian era geology herbert suggests profoundly shaped darwin s mind and his scientific methods as he worked toward a full blown understanding of evolution and natural selection

foreword by christoph cardinal schönborn darwin s theory of evolution remains controversial even though most scientists philosophers and even theologians accept it in some form as an explanation for the variety of organisms the controversy erupts when the theory is used to try to explain everything including every aspect of human life and to deny the role of a creator or a purpose to life the overreaching of many scientists into matters beyond the self imposed limits of scientific method is perhaps explained in part by the loss of two important ideas in modern thinking final causality or purpose and formal causality scientists understandably bracket the idea out of their scientific thinking because they seek explanations on the level of material and efficient causes only yet many of them wrongly conclude from their selective study of the world that final and formal causes do not exist at all and that they have no place in the rational study of life likewise many erroneously assume that philosophy cannot draw upon scientific findings in light of final and formal causality to better understand the world and man the great philosopher and historian of philosophy Étienne gilson sets out to show that final causality or purposiveness and formal causality are principles for those who think hard and carefully about the world including the world of biology gilson

insists that a completely rational understanding of organisms and biological systems requires the philosophical notion of teleology the idea that certain kinds of things exist and have ends or purposes the fulfillment of which are linked to their natures in other words formal and final causes his approach relies on philosophical reflection on the facts of science not upon theology or an appeal to religious authorities such as the church or the bible the object of the present essay is not to make of final causality a scientific notion which it is not but to show that it is a philosophical inevitability and consequently a constant of biophilosophy or philosophy of life it is not then a question of theology if there is teleology in nature the theologian has the right to rely on this fact in order to draw from it the consequences which in his eyes proceed from it concerning the existence of god but the existence of teleology in the universe is the object of a properly philosophical reflection which has no other goal than to confirm or invalidate the reality of it the present work will be concerned with nothing else reason interpreting sensible experience does it or does it not conclude to the existence of teleology in nature Étienne gilson

this book is about a group of victorian british writers and artists darwin stevenson gaskell ruskin pater brown and turner whose work emerges from recollection and whose texts embody the experience of nostalgia the study concentrates on the longing for a past that traverses the span of these writers and artists own lifetime it examines their particular experience of the nostalgic moment and provides an occasion to re examine the idea of nostalgia and to reflect on the act of recollection

recreates the scientist s historic visit to the galapagos islands using his original notebooks and logs the latest findings by scholars and researchers and the authors first hand knowledge of the archipelago
