encyclopedic in scope reversibility of chronic degenerative disease and hypersensitivity volume 2 the effects of environmental pollutants on the organ system draws deeply from clinical histories of thousands of patients. It focuses on clinical syndromes within the musculoskeletal, gastrointestinal and respiratory systems. The book explores mechanisms of chemical sensitivity and chronic degenerative disease as well as the triggering agents of musculoskeletal, gastrointestinal and sino respiratory diseases. It then discusses triggering agents such as natural gas, pesticides, solvents and micotoxins. The authors include new data for indoor and outdoor air pollution that harms the chemically sensitive and chronic degenerative disease patient as well as new data for breath analysis. They also describe the physiology of chemical sensitivity and chronic degenerative diseases, their manifestations, diagnosis and approaches to reverse dysfunction. The second volume of a five volume set, the book provides an essential resource for health care providers diagnosing and treating chemical sensitivity and chronic degenerative disease.

The clinical approaches to the chronic degenerative diseases that drain our resources and compromise our well-being have become almost exclusively symptom focused. The common wisdom is that they are idiopathic with final outcomes to be managed rather than prevented or cured. That they are potentially reversible rarely enters into any discussion.
