this study examines the relationship between the people s republic of china and the people of

east turkistan specifically between china s settler colonialism and east turkistan s independence movement what distinguishes this study is its dispassionate analysis of the east turkistan s national dilemma in terms of international law and legal precedent as well as the prudence with which it distinguishes substantial evidence from claims of china s crimes against humanity and genocide in east turkistan that have not been fully verified yet the author demonstrates how other states have ignored the nature of that relationship and so avoided asking key questions about east turkistan that have been asked and answered about other occupied and colonized states the book analyzes this situation and provides the tools and the argument to understand east turkistan s actual status in the international community currently the world has bought into china s rhetoric about stability and fighting extremism and international organizations accept china s presentation of uyghurs and other people as minorities within a chinese nation state this book instead shows east turkistan can correctly be understood through history and law as an illegally occupied territory undergoing genocide it also makes the case that east turkistani people had basis advancing territorial claim for independence

we introduce a lazy xslt interpreter that provides random access to the transformation result this allows efficient pipelining of transformation sequences nodes of the result tree are computed only upon initial access as these computations have limited fan in sparse output coverage propagates backwards through the pipeline in comparative measurements with traditional eager implementations our approach is on par for complete coverage and excels as coverage becomes sparser in contrast to eager evaluation lazy evaluation also admits infinite intermediate results thus extending the design space for transformation sequences to demonstrate that lazy evaluation preserves the semantics of xslt we reduce xslt to the lambda calculus via a functional language while this is possible for all languages most imperative languages cannot profit from the confluence of lambda as only one reduction applies at a time
