a few years ago nobody would have anticipated that in connection with degeneracy in linear programming quite a new field could originate in 1976 a very simple question has been posed in the case an extreme point ep of a polytope is degenerate and the task is to find all neighbouring ep s of the degenerate ep is it necessary to determine all basic solutions of the corresponding equalities system associated with the degenerate ep in order to be certain to determine all neighbours of this ep this question implied another one does there exists a subset of the mentioned set of basic solutions such that it suffices to find such a subset in order to determine all neighbours the first step to solve these questions which are motivated in the first chapter of this book was to define a graph called degeneracy graph the nodes of which correspond to the basic solutions it turned out that such a graph has some special properties and in order to solve the above questions firstly these properties had to be investigated also the structure of degeneracy graphs plays hereby an important role because the theory of degeneracy graphs was quite new it was necessary to elaborate first a completely new terminology and to define new notions dr
