The book deals with the record of important neoproterozoic to early palaeozoic events in southwestern Gondwana that heralded the Cambrian explosion and the dawn of modern ecosystems. It contains a detailed account of the neoproterozoic to Cambrian geological record in a poorly known part of the world which is at the same time key to understand fundamental processes at the Proterozoic-Cambrian transition. The emphasis is placed on litho-bio-chemostratigraphy and magmatism. The palaeoclimatic, tectonic, evolutionary, radiation and extinction events and associated mineralizations will be identified and discussed. A synthesis of all data is provided at the end of the book integrating the data from all cratons and fold belts in southwestern Gondwana. The events will be individualized, their impact discussed and correlations between different successions both within and outside Gondwana proposed. The book is organized in three sections. Section one is an introduction to the neoproterozoic and Cambrian seen as a time of upheavals, extremes and innovations. Section two comprises nineteen chapters dealing with the neoproterozoic-Cambrian events in southwestern Gondwana. Section three will provide a synthesis on every major topic and a critical assessment of the global implications of the presented data. The past decade has witnessed a major revival in attempts to separate biodiversity signals from biases imposed by sampling and the architecture of the rock record. How large a problem this poses to our understanding of biodiversity patterns remains debatable and new approaches are being developed to investigate this question. Here palaeobiologists with widely differing approaches and interests explore the problems of extracting reliable information on biodiversity change from an imperfect geological record. Topics covered range from the application of information theoretic approaches that identify directional causal relationships to an in-depth study of how geological biases could influence our understanding of dinosaur evolution.
