seventy five years after the end of the second world war the details of soviet ships their activities  
 and fates remain an enigma to the west in wartime such information was classified and after a  
 brief period of glasnost openness the russian state has again restricted access to historical  
 archives therefore the value and originality of this work is difficult to exaggerate it sees the first  
 publication of reliable data on both the seagoing fleets and riverine flotillas of the soviet navy  
 listing over 6200 vessels from battleships to river gunboats and mercantile conversions as well as  
 purpose built warships this second part of the three volume series includes all the remaining  
 fighting vessels not already covered in volume i beginning with the uragan class rated as escort  
 ships and the first seagoing warships designed by the soviet union the book then moves on to  
 submarine hunters both large and small patrol craft minelayers and minesweepers and unusual  
 types like floating artillery batteries and anti aircraft defense ships concluding with landing ships  
 and craft many of these vessels have hitherto been poorly documented but given the nature of  
 the land centered soviet war against germany their contribution should not be underestimated the  
 details of their service and not least the circumstances of their loss constitute a major addition to  
 western understanding of the soviet navy s war effort this is undoubtedly one of the most  
 important naval reference works of recent years and will be welcomed by anyone with an interest  
 in warships the soviet navy or wider maritime aspects of the second world war furthermore as  
 recent russian actions appear to revive soviet era aspirations this book offers both new insights  
 and valuable background of contemporary relevance
