this book presents a collection of chapters both empirical and conceptual that challenge existing paradigms of learning and teaching provides examples of pedagogical spaces and practices that nurture future oriented learners explicates identities and transitions in learning and offers alternative frames for moving forward educational structures have proven remarkably resilient more often than not pedagogical designs still privilege the lecture tutorial format front end loading and the positioning of the teacher as expert in a similar vein pedagogical spaces tend to privilege the formal educational institution and its discourses rather than productively engage with naturally occurring learning spaces at work and in communities to better prepare and support learners for dynamically changing futures we need to truly flip the lens from teaching to learning positioning at the core the learner in contexts where learning and becoming occurs this means considering what counts as a future oriented learner and educator recognising the importance of evolving identities transitions and pathways that facilitates the processes of being and becoming equally important is the design and appropriation of pedagogical spaces and practices that are in themselves dynamic and future oriented this book questions the current delineation between the spaces of work learning and communities

in the near future we will see an increase in the development and use of all sorts of ai applications some of the more promising areas will be finance healthcare iot manufacturing journalism and cybersecurity many of these applications generate a great amount of complex information natural language understanding is one of the most clear examples traditional ways of visualizing complex information namely linear text web pages and hyperlink based applications have serious productivity problems users need a lot of time to visualize the information and have problems seeing the whole picture of the results mind mapping is probably the only way of reducing the problems inherent in

these traditional ways of visualizing complex information most people have no clear idea about the advantages of mind mapping or the problems created by the traditional ways of visualizing complex information the goal of mind mapping and artificial intelligence is to provide readers with an introduction to mind mapping and artificial intelligence to the problems of using traditional ways of visualizing complex information and as an introduction to mind mapping automation and its integration into artificial intelligence applications such as nlu and others as more applications of artificial intelligence are developed in the near future the need for the improvement of the visualization of the information generated will increase exponentially information overload will soon also happen in ai applications this will diminish the advantages of using ai author José María Guerrero is a long time expert in mind mapping and visualization techniques in this book he also introduces readers to mindmanager mind mapping software which can considerably reduce the problems associated with the interpretation of complex information generated by artificial intelligence software provides coverage of the fundamentals of mind mapping and visualization applied to artificial intelligence applications includes coverage of the scientific bases for mind mapping for the visualization of complex information introduces mindmanager software for mind mapping introduces the author's mindmanager toolkit for the readers to use in development of new mind mapping applications includes case studies and real world applications of mindmanager for ai applications including examples using ibm watson nlu
