a deep dive into indoor optical wireless communication networks in short reach optical
wireless communication by directed narrow beams distinguished researcher ton koonen
delivers an in depth discussion of the design of indoor optical wireless networks and
their key functions the book explores the steering function for directing beams two
dimensionally to devices the localization function for device finding and the receive
function for devices in order to maximize the range of angles and aperture through
which light can be captured these functions have been analyzed designed realized and
validated as well as integrated in a laboratory setting for proof of concept of bidirectional
all optical wireless communication the book also includes a thorough introduction to how
key optical wireless communication techniques are realized and validated illustrative
examples of optical wireless technology practical discussions of foundational concepts
that underlie optical wireless communication and its expected benefits and a comparison
with radio wireless techniques a large collection of figures including photos of
experimental setups layouts of system concepts and optical system modelling based on
ray tracing analysis using matlab perfect for academic and industrial researchers with an
interest in optical wireless communication short reach optical wireless communication by
directed narrow beams will also benefit professionals working and studying in the areas
of optical communication modules and systems
