more than two decades ago in response to the special healthcare needs of the aging american population interest in the field of geriatric medicine began to grow and blossom in the united states in 1984 and 1985 under the editorial leadership of christine k cassel and william r hazzard respectively two major textbooks devoted to the medical care of aged patients were published these scholarly comprehensive texts provided insight into the principles of aging and guidance in the care of the geriatric patient three editions later the need to understand the special issues involved in the medical care of the elderly is widely accepted by internists primary care providers and medical specialists for the editors of this book the special issues

involved in the surgical care of the elderly have been apparent for nearly as long although there have been a few scholarly texts on the subject including one in 1990 by Mark R. Katlic. General acceptance of the concept of geriatric surgery by our surgical and medical colleagues has however lagged. This is not the result of a proportionately smaller number of older patients with surgical disease because cancer, cardiovascular disease, and orthopedic problems are diseases of the aged. It is rather the result of uncertainty about the value of surgery in the elderly and concerns about the risks of operations. In the past, such concerns prevented primary care givers from referring patients for surgical care and prevented surgeons from agreeing to operate.

Emergency general surgery has become a cornerstone of acute care surgery over the past decade. Once the scope of community general surgeons, the growing complexity of patients with acute surgical diseases has increasingly driven their care to tertiary referral centers. The aging population confounds this problem further as these patients present with more complex comorbidities, life-threatening physiology, and progressively severe anatomic disease. Severity to ensure better outcomes, the practice has evolved to focus on evidence-based practice management guidelines in order to standardize care and optimize outcomes. The purpose of this text is to be a comprehensive volume for patients with acute surgical diseases. There will be three sections, each comprised of multiple chapters. The first section will be a comprehensive analysis of the background of emergency general surgery. The goal of this section will be to provide the reader background into the acute surgical practice and to introduce the reader to the important concepts discussed in the remainder of the textbook. The second section will be the largest and will discuss specific acute surgical diseases. Individual chapters will outline the diagnostic approach, current treatment standards, operative approaches, and expected outcomes, with an emphasis on practice management guideline implementation into practice. As acute surgical diseases and surgical critical care are integral to each other, the last section will be critical care for the acute care surgeon. These topics will focus on the critical care concepts essential to surgeons who care for acute diseases. This comprehensive text is targeted to any surgeon who takes emergency call for any of the listed diseases, including community and referral general and vascular surgeons. In addition, this would be an excellent resource for all general surgery residents. Lastly, this would also serve as a resource to intensivists who care for acute surgical patients.
