2023 afhf air power history book prize winner emergency war plan examines the theory and practice of american nuclear deterrence and its evolution during the cold war previous examinations of nuclear strategy during this time have for the most part categorized american efforts as massive retaliation and mutually assured destruction blunt instruments to be casually dismissed in favor of more flexible approaches or summed up in inflammatory and judgmental terms like mad these descriptors evolved into slogans and any nuanced discussion of the efficacy of the actual strategies withered due to a variety of political and social factors drawing on newly released weapons effects information along with new information about soviet capabilities as well as risky and covert espionage missions emergency war plan provides a completely new examination

of american nuclear deterrence strategy during the first fifteen years of the cold war the first such study since the 1980s ultimately what emerges is a picture of a gargantuan and potentially devastating enterprise that was understood at the time by the public in only the vaguest terms but that was not as out of control as has been alleged and was more nuanced than previously understood

resistance is a product of will times means carl von clausewitz postulated in his treatise on war in his 1993 bombs cities and civilians which the american historical review judged must reading for anyone interested in the subject of air warfare conrad c crane focused on the moral dimension of american air strategy in world war ii specifically the allied effort to break the enemy s will through targeting civilians with decades of research and reflection and a wealth of new material at his command crane returns to the subject of america s wwii airpower strategy to offer an analysis fully engaged with the means side of clausewitz s equation the design and impact of strategic bombing of the enemy s infrastructure and thus its capacity to fight a marked advance in our understanding of the use of airpower in war in general and the second world war in particular crane s work shows how despite an undeniable lack of concern about civilian casualties in germany and japan late in the war american strategic bombing in wwii consistently focused on destroying the enemy s war making capacity instead of its collapsing will further crane persuasively argues that in the limited wars since then separating such targets has become increasingly more difficult and all air campaigns against states have subsequently escalated to accept greater risks for civilians american airpower strategy in world war ii also provides an expanded close look at the use of airpower in the last three months of the strategic air war against germany when so many bombing missions relied upon radar aids as well as the first direct comparison of 8th and 15th air force bombing campaigns in europe the result is the most coherent and concise analysis of the application and legacy of allied strategic airpower in wwii and a work that will inform all future practical and theoretical consideration of the use and the role of airpower in war

ultimately this study is about a smaller vietnam war than that which is commonly recalled it focuses on expectations concerning the impact of air power on the ground war and on some of its actual effects but it avoids major treatment of some of the most dramatic air actions of the war such as the bombing of hanoi to many who fought the war and believe it ought to have been conducted on a still larger scale or with fewer restraints this study may seem almost perverse emphasizing as it does the utility of air power in conducting the conflict as a ground war and without total exploitation of our most awe inspiring technology although the chapters in this study are intended to form a coherent and unified argument each also offers discrete messages the chapters are not meant to be definitive they do not exhaust available documentary material and they often rely heavily on published accounts nor do they provide a complete chronological picture of the uses of air power even with respect to the ground war nor is coverage of areas in which air power was employed south vietnam laos cambodia and north vietnam evenly distributed nor necessarily proportionate to the effort expended in each place during the war lastly some may find one or another form of air power either slightly or insufficiently treated such criticisms are beside the point for the objectives of this study are to explore a comparatively neglected theme the impact of air power on the ground and to encourage further utilization of lessons drawn from the vietnam experience
