the 11th international symposium on graph drawing gd 2003 was held on september 21 24 2003 at the universit a degli studi di perugia perugia italy gd 2003 attracted 93 participants from academic and industrial institutions in 17 countries in response to the call for papers the program committee received 88 re larsubmissionsdescribingoriginalresearchand

orsystemdemonstrations each submission was reviewed by at least 4 program committee members and comments were returned to the authors following extensive e mail discussions the program committee accepted 34 long papers 12 pages each in the proceedings and 11 short papers 6 pages each in the proceedings also 6 posters 2 pages each in the proceedings were displayed in the conference poster gallery in addition to the 88 submissions the program committee also received a submission of special type one that was not competing with the others for a time slot in the conference program and that collects selected open problems in graph drawing the aim of this paper which was refereed with particular care and unchanged two rounds of revisions is to stimulate future research in the graph drawing community the paper presents 42 challenging open problems in different areas of graph drawing and contains more than 120 references although the length of the paper makes it closer to a journal version than to a conference extended abstract we decided to include it in the conference proceedings so that it could easily reach in a short time the vast majority of the graph drawing community

this book constitutes the refereed proceedings of the 10th international workshop on algorithms and data structures wads 2007 held in halifax canada in august 2007 the papers present original research on the theory and application of algorithms and data structures in all areas including combinatorics computational geometry databases graphics parallel and distributed computing

this professional treatise on engineering graphics emphasizes engineering geometry as the theoretical foundation for communication of design ideas with real world structures and products it considers each theoretical notion of engineering geometry as a complex solution of direct and inverse problems of descriptive geometry and each solution of basic engineering problems presented is accompanied by construction of biunique two and three dimension models of geometrical images the book explains the universal structure of formal algorithms of the solutions of positional metric and axonometric problems as well as the solutions of problems of construction in developing a curvilinear surface the book further characterizes and explains the added laws of projective connections to facilitate construction of geometrical images in any of eight octants laws of projective connections allow constructing the complex drawing of a geometrical image in the american system of measurement and the european system of measurement without errors and mistakes the arrangement of projections of a geometrical image on the complex drawing corresponds to an arrangement of views of a product in the projective drawing for the european system of measurement the volume is ideal for engineers working on a range of design projects as well as for students of civil structural and industrial engineering and engineering design
