what is operations management every business is managed through three major functions finance marketing and operations management illustrates this by showing that the vice presidents of each of these functions report directly to the president or ceo of the company other business functions such as accounting purchasing human resources and engineering support these three major functions finance is the function responsible for managing cash flow current assets and capital investments marketing is responsible for sales generating customer demand and understanding customer wants and needs most of us have some idea of what finance and marketing are about but what does operations management do operations management om is the business function that plans organizes coordi nates and controls the resources needed to produce a company s goods and services operations management is a management function it involves managing people equipment technology information and many other resources operations management is the central core function of every company this is true whether

managing the dynamics of new product development processes merges product based planning process modelling process execution probabilistic simulations and simulation based decision making into one framework called the dynamic new product development process it provides readers with a means of improving the management of product development through enhanced methods and tools that are specifically tailored to the characteristics and challenges of such processes it calls for a new product lifecycle management paradigm of utilizing the managed product data for management of the product s development process within the framework the methods used are enhanced or modified to fit the new product development process requirements each specific method is exhaustively analyzed

from the basic definition of terms through a description of the state of the art of that topic and its limitations then the method enhancements are illustrated by many examples and discussed while suggesting further research directions finally the enhanced methods are integrated and demonstrated by a test case the main two methods described are the design structure matrix dsm and petri nets which are merged into a novel concept entitled dsm nets managing the dynamics of new product development processes provides algorithms proofs and practical examples that can be used for general study of the issues concerned the main concepts presented are applicable to systems engineering and can be used by practitioners of product development processes such as designers product managers and process managers as well as developers of process management tools for systems with dynamically changing process structures
