our approach to teaching and learning human anatomy is to focus on big concepts and then hang the details from those concepts when learning about tissues we spend time understanding the structure and functions of the four main tissue types when examining a tissue students are guided to start with identifying which of the four major tissue types is presented and then dig down to the detailed type within that category in examination of brain structures first identify if the structure is gray matter or white matter terminology helps with this nuclei are cell bodies thus gray matter tracts are myelinated axons thus white matter this will then guide your understanding of the function of the structure muscle location function and innervation are more easily integrated and remembered when muscles are learned in functional groups and muscle compartments these are just a few examples of this approach in class or laboratory i often ask students to look up from the details if they are focusing on the details without seeing the broader grouping it s just a blur of details connecting details to the larger concepts creates a hierarchical framework which solidifies understanding it is this approach that has guided this revision
