publisher description

economics is often defined as the science of choice or human action but choice and action are essentially mental phenomena an aspect rarely mentioned in the economics discourse choice while not always a conscious or rational process is held to involve beliefs desires intentions and arguably even free will actions are often opposed to mere bodily movements with the former being in some sense only understandable in reference to mental processes while the latter are understandable in entirely non mental physical terms while philosophers have long concerned themselves with the connections between these concepts economists have tended to steer clear of what might appear to be an a priori debate at the same time philosophers working on these important notions have tended to not dirty their hands with the empirical real world applications in which economists are specialized this volume fills these gaps by bringing economists and philosophers of mind together to explore the intersection of their disciplines

upon hearing that ronald coase had been awarded the nobel prize a fellow economist s first response was to ask with whom coase had shared the prize whether this response was idiosyncratic or not i do not know i expect not part of this type of reaction can no doubt be explained by the fact that coase has often been characterized as an economist who wrote only two significant or influential papers the nature of the firm 1937 and the problem of social cost 1960 and by typical professional standards of significant and influential i e widely read and cited this perception embodies a great deal of truth even subsequent to coase s receipt of the prize this is not to say that there have not been other important works the marginal cost controversy 1946 and the lighthouse in economics 1974 come immediately to mind here only that in a random sample of say one hundred economists one would likely find few who could list a coase bibliography beyond the two classic pieces noted above in spite of coase s significant publication record the purpose of this collection is to assess the development of tensions within and prospects for coasean economics those aspects of economic analysis that have evolved out of coase s path breaking work two major strands of research can be identified here law and economics and the new institutional economics

in this volume more than forty leading economists including nobel laureate paul samuelson and robert solow critically evaluate the work of geoff harcourt

based on the premise that mainstream economics has become excessively specialized and formalized entering a state of de facto withdrawal from the study of the economy in favour of exercises in applied mathematics this book illustrates the potentially enlightening relationship between economics and a wide range of social science disciplines

coyle offers convincing arguments that economics today is more soulful than dismal a more practical and human science than ever before the soulful science describes the remarkable creative renaissance in how economics is addressing the most fundamental questions and how it is starting to help solve problems such as poverty and global warming coyle tells how economics got its soul back and how it just might help save the planets

the underlying notion in this volume is to spotlight critically assess and illuminate paul a samuelson s extraordinarily voluminous diverse and groundbreaking contributions that encompass the entire field of economics through the lens of most eminent scholars all this in honor of his ninetieth birthday celebrated on may 15 2005 in fairmont hotel in boston in the company of hundreds of scholars and their spouses pref

why are houses so expensive is our banking system going to collapse again should we be worried that robots are going to take all our jobs and just what exactly is the economy anyway economists and politicians would have you believe it is a rarified topic best left to the experts the experts are wrong this book uncovers what people really mean when they talk about the economy taking the word off its pedestal and showing that it s just a lens for seeing the world around us that at its heart economics is about you and the society you re a part of explaining key concepts in economics in relation to how they directly affect your life from your money to your home your workplace to your future what is the economy dragging the obscure world of economics kicking and screaming towards the everyday and equips you with clarity and understanding

this authored monograph presents an unconventional approach to an important topic in economic theory the author is an expert in the field of viability theory and applies this theory to analyze how an economy should be dynamically endowed so that it is economically viable economic viability requires an assumption on the joint evolution of transactions fluctuations of prices and units of numeraire goods the sum of the transactions values and the impact of price fluctuations should be negative or equal to zero the book presents a computation of the minimum endowment which restores economic viability and derives the dynamic laws that regulate both transactions and price fluctuations the target audience primarily comprises open minded and mathematically interested economists but the book may also be beneficial for graduate students

the bulk of contemporary economics assumes rather than explains differences between people or groups of people yet many of these differences are produced by society or they imply differing opportunities and outcomes this book argues that economists should concern themselves with the explanation of the social causes and effects of such differences d ippoliti introduces the concept of diversity to summarise all differences that are of social origin and that a theory or model seeks to explain this contrasts with the traditional concept of heterogeneity that instead refers to differences that are deemed to be exogenous of economic theory in approaching this the book ranges from the fields of methodology and history of economics to applied empirical work as well as gender diversity which is considered in depth the analysis of the thinking of two major economists of the past john stuart mill and gustav schmoller demonstrates how gender diversity

exemplifies some of the fundamental issues in economics such as the division of labour society's capacity to reproduce itself and the role of social institutions and their impact on individual and collective behaviour the book maintains that growth of gdp and of the services sector cannot be trusted to automatically bring about greater inclusion of women in the labour market active policy interventions are needed spanning from the removal of discrimination to the provision of public services and the establishment of fair competition in the market along with an improved division of social and political power between the sexes this work will be of interest to researchers and students focusing on the history of economic thought labour economics social policy and gender studies

in such turbulent economics times this resource enables you to get to grips with all the issues in today's economy discussed at length everywhere you look in the media key terms are explained clearly using practical analogies to aid understanding

bertram schefold is recognized internationally as an outstanding economist he has made major contributions to the development of economic theory and particularly to economic thought his contributions to economic theory include his work on sraffian economics and its implications for the theory of value and distribution capital theory growth and technical progress this book consists of ten papers by distinguished economists from europe the united states and japan the papers cover a range of topics chosen according to bertram schefolds main fields of research from wicksell's principle of just taxation to sraffa and the universal basic income to marx's theory of value covering schefold's main areas of academic interest this is an important and comprehensive volume which is a fitting tribute to one of the foremost economic thinkers of our age

twenty four economists discuss how they promote egalitarianism democracy and ecological sanity through research activism and policy engagement economics and the left presents interviews with twenty four leading progressive economists all of these practitioners of the dismal science are dedicated to both interpreting the world and changing it for the better the result is a combustible brew of ideas and reflections on major historical events including the covid 19 pandemic and its impact on the global economy interviewed are michael ash nelson henrique barbosa filho james k boyce ha joon chang jane d arista diane elson gerald epstein nancy folbre james k galbraith teresa ghilarducci jayati ghosh ilene grabel costas lapavitsas zhongjin li william milberg léonce ndikumana ozlem onaran robert pollin malcolm sawyer juliet schor anwar shaikh william spriggs fiona tregenna and thomas weisskopf
