this unique new work of reference traces the origins of the modern laws of warfare from the earliest times to the present day relying on written records from as far back as 2400 bce and using sources ranging from the bible to security council resolutions the author pieces together the history of a subject which is almost as old as civilisation itself the author shows that as long as humanity has been waging wars it has also been trying to find ways of legitimising different forms of combatants and ascribing rules to them protecting civilians who are either inadvertently or intentionally caught up between them and controlling the use of particular classes of weapons that may be used in times of conflict thus it is that this work is divided into three substantial parts volume 1 on the laws affecting combatants and captives volume 2 on civilians and volume 3 on the law of arms control this second book on civilians examines four different topics the first topic deals with the targetting of civilians in times of war this discussion is one which has been largely governed by the developments of technologies which have allowed projectiles to be discharged over ever greater areas and attempts to prevent their indiscriminate utilisation have struggled to keep pace the second topic concerns the destruction of the natural environment with particular regard to the utilisation of starvation as a method of warfare and unlike the first topic this one has rarely changed over thousands of years although contemporary practices are beginning to represent a clear break from tradition the third topic is concerned with the long standing problems of civilians under the occupation of opposing military forces where the practices of genocide collective punishments and or reprisals and rape have occurred the final topic in this volume is about the theft or destruction of the property of the enemy in terms of either pillage or the intentional devastation of the cultural

property of the opposition as a work of reference this set of three books is unrivalled and will be of immense benefit to scholars and practitioners researching and advising on the laws of warfare it also tells a story which throws fascinating new light on the history of international law and on the history of warfare itself

cambridge is now world famous as a centre of science but it wasn t always so before the nineteenth century the sciences were of little importance in the university of cambridge but that began to change in 1819 when two young cambridge fellows took a geological fieldtrip to the isle of wight adam sedgwick and john stevens henslow spent their days there exploring unearthing

dazzling fossils dreaming up elaborate theories about the formation of the earth and bemoaning the lack of serious science in their ancient university as they threw themselves into the exciting new science of geology conjuring millions of years of history from the evidence they found in the island's rocks they also began to dream of a new scientific society for Cambridge this society would bring together like minded young men who wished to learn of the latest science from overseas and would encourage original research in Cambridge it would be they wrote a society to keep alive the spirit of inquiry their vision was realised when they founded the Cambridge Philosophical Society later that same year its founders could not have imagined the impact the Cambridge Philosophical Society would have it was responsible for the first publication of Charles Darwin's scientific writings and hosted some of the most heated debates about evolutionary theory in the nineteenth century it saw the first announcement of X-ray diffraction by a young Lawrence Bragg a technique that would revolutionise the physical chemical and life sciences it published the first paper by C. T. R. Wilson on his cloud chamber a device that opened up a previously unimaginable world of sub atomic particles 200 years on from the society's foundation this book reflects on the achievements of Sedgwick Henslow their peers and their successors Susannah Gibson explains how Cambridge moved from what Sedgwick saw as a death like stagnation really little more than a provincial training school for Church of England clergy to being a world leader in the sciences and she shows how science once a peripheral activity undertaken for interest by a small number of wealthy gentlemen has transformed into an enormously well funded activity that can affect every aspect of our lives
