while piloting his spaceship through the skies captain invincible encounters three dimensional shapes including cubes cylinders and pyramids

captain invincible along with his faithful canine companion comet must use his knowledge of three dimensional shapes to avoid such dangers as flying saucers meteor showers and poison gas in order to make it safely back to earth simultaneous

this is a revised and updated edition of graham nerlich s classic book 1976 it develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories arguing that geometrical explanation is very like causal explanation professor nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently along the way professor nerlich criticizes and rejects conventionalism as a non realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion

light the shape of space designing with space and light lou michel every design professional who touches a space shapes the light and the feeling of that space architect lighting engineer interior designer lighting or home furnishing manufacturer each contributes an aesthetic layer sometimes yielding unexpected results all too often the best laid plans of one professional are unintentionally subverted by another removing surprises and guess work from design lou michel honored architectural lighting educator has created light the shape of space showing how to design with the effects of light rather than light itself the book is a revolutionary resource for all design professionals and manufacturers of surfacing materials drawing on over fifteen years experience of research and teaching in the architectural space and light laboratory at the university of kansas michel masterfully examines the interrelationship of lighting and the design of architectural space as perceived not in architectural photos or paint

chips and fabric swatches but by human vision the gateway to emotional response the book was written for professionals who care about how people feel in the spaces they design and focuses on the humanization of architecture taking a non stylistic approach to design michel analyzes architecture from the perspective of how the users see their surroundings as they move through space the reader will learn what pleases and what disturbs people based on how the human visual system responds to color texture pattern and brightness the book features principles of design for the student and professional and is generously supported by illustrations and research michel also provides a method for evaluating the visual effectiveness of building materials and lighting systems including those that will appear on the market long after this book is dog eared michel unveils a groundbreaking luminance brightness rating system lbr and a nine zone brightness scale to aid designers in previsualizing the appearance of surfacing materials at every stage of the design process from schematics to development to refinement among the topics treated are the interaction of lighting and spatial design color theory for space and light the luminance relationships between free standing objects and the surrounding spatial boundaries against which they are seen the appearance of building materials in color and brightness when modified by light and spatial location lighting spatial connections including the perception of rooms adjacent to the observer lighting and perception of spaces screened by architectural grilles creating lighted space designing with the effects of light is both an art and a science no other book on the market bridges that gap as successfully as light the shape of space

the book is an attempt to present a logical approach to contextual design with a lot of buzz around sustainability architects analyze contexts in detail to propose sustainable designs hence the contextual design approach is gaining importance in architectural practice architects and designers are always inclined to adopt an intuitive approach to design in historical contexts or surroundings with peculiar characteristics there is no specific methodical approach to design in such contexts apart from the ability to identify cues from the surrounding through experience this book presents a sequential framework wherein one can analyze synthesize and generate design genotypes based on the inbuilt spatial grammar of the context the shape grammar concept as a generative tool is presented to identify the spatial constructs grammar which acts as a cue for design genotypes space syntax is explored as an analysis tool to evaluate the sympathetic spatial fitness of generated design genotypes the book establishes that the framework is logical in its methodical approach and would generate design genotypes which would help architects and designers have design interventions in in fill development to achieve congruence with the surrounding environment
