first published in 1991 this book holds the proceedings of the united nations institut national d etudes demographiques expert group meeting new york held on the 23 26 august 1988 topics include the global trends in population growth adaptation to rapid population growth aspects and normative problems

substantial social and economic progress in sub saharan africa during the past 15 years has not altered the traditional regime of very high fertility explanations for this paradox have to turn to broad societal characteristics not captured by multivariate analysis of the household level the search for physical survival promotes a very large family norm high fertility may also reflect the predicament of the african woman this paper argues that enough is known to provide a reliable basis for policies aimed at reducing fertility the case for such policies rests on evidence that the challenge posed by accelerating population growth in africa has not elicited a commensurate response in the form of technological or organizational progress instead growing population numbers have accentuated the food deficit magnified the budgetary problem of financing basic needs services and complicated the employment issue the paper projects future population

growth of nine sample countries accounting for two thirds of africa s total population on the basis of four sets of assumptions these exercises confirm the desirability of action by african governments to reduce fertility

this text examines the effects of population growth and our use of natural resources on the environment it also considers how best people can manage the changes that occur considering economic and environmental issues and the need for sustainable solutions

the population of the modern world continues to grow at a rate unprecedented in human history how are we to explain this massive increase in the number of living people what is its consequence now and for the future how have populations changed in size and structure since the advent of industrial technology can we predict the population trends in developing countries these and many other significant questions are dealt with in a persuasive yet accessible manner in ronald freedman s pivotal population growth modern population trends are unique in historical perspective describing them as part of a vital revolution is not an exaggeration the more popular term population explosion is less accurate because it refers to only one aspect of the current situation the unprecedented growth rates in the last two centuries other important trends have developed also without precedent in all of the previous millennia of human history while the size of population growth is very important in itself the essays in this volume demonstrate that many other aspects of structure and change in populations are equally important in readable non technical language these collected essays analyze the most important modern trends in world population the essays include comprehensive discussions of population theory analyses of population trends and prospects in the united states and surveys of population trends in other major areas of the world as a survey of current population problems this book will be a library staple for those involved in international development programs sociologists family planning workers and everyone concerned with the contemporary vital revolution in population

as technology makes the world more accessible it is increasingly important to develop a wide perspective on social issues as well as political environmental and health issues of global significance this volume focuses on the issue of population growth from a variety of international perspectives readers will evaluate population growth and its relationship to hunger the environment the economy and society essay sources include walhi the indonesian forum for environment the economist and the galapagos conservancy helpful features include an annotated table of contents a world map and country index a bibliography and a subject index

this book addresses nine relevant questions will population growth reduce the growth rate of per capita income because it reduces the per capita availability of exhaustible resources how about for renewable resources will population growth aggravate degradation of the natural environment does more rapid growth reduce worker output and consumption do rapid growth and greater density lead to productivity gains through scale economies and thereby raise per capita income will rapid population growth reduce per capita levels of education and health will it increase inequality of income distribution is it an important source of labor problems and city population absorption and finally do the economic effects of population growth justify government programs to reduce fertility that go beyond the provision of family planning services

food resources agriculture global ecosystem greenhouse effect acid rain desertification health epidemics and disease economic management solutions

the main contribution of this book lies in its focus on real alternatives in future population growth at some time taken as 1956 in india for this case study a low income country may have the option of effectively promoting the reduction of fertility or by inaction of permitting fertility to remain at high levels this book clearly shows the nature and extent of the economic gains resulting from fertility reduction since most low income areas are destined for rapid population growth even

with substantial fertility declines the emphasis is placed between moderately rapid and very rapid growth the extensive quantitative population projections show the importance of the growth rate itself and of changes in age distribution in addition to population size the results for india have direct implications for all low income primarily agrarian areas entering a program of economic development originally published in 1958 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905

this essay sheds light on what is population growth demystifies what causes the occurrence of population growth in a population and delineates the benefits of the occurrence of population growth in a population succinctly stated population growth is a term that delineates an amplification in the size of a population an amplification in the size of a population transpires when the new members of a population are born at a higher rate than the rate at which the members of a population pass away at the natality to mortality ratio refers to a ratio that states the birth rate of a population to the death rate of a population amid a specific time period a high natality to mortality ratio denotes that a population has more of its members being born than passing away whereas a low natality to mortality ratio denotes that a population has more of its members passing away than being born furthermore a high natality to mortality ratio also denotes that a population is increasing whereas a low natality to mortality ratio denotes that a population is decreasing the rate at which a population amplifies at is predicated upon the rate at which the new members of a population are born at and the rate at which the members of a population pass away at it is desirable for a population to have a natality rate that is high enough to surpass its mortality rate a significant amplification in the quantity of the members of a population being born can have bearing on helping a population to attain a high natality to mortality ratio furthermore a significant amplification in the average life expectancy of

the members of a population can also have bearing on helping a population to attain a high natality to mortality ratio a significant decrease in the mortality rate of a population coupled with a significant increase in the natality rate of a population is conducive to helping to facilitate population growth in a population a significant decrease in the mortality rate of a population transpires when there is a significant amplification in the average life expectancy of the members of a population a significant increase in the natality rate of a population transpires when more married couples in a population opt to churn out an increased quantity of offspring the occurrence of population growth in a population can transpire with relative ease if the married couples in a population opt to an increased quantity of offspring as of 2023 even though married couples are often eager to churn out an increased quantity of offspring married couples on average limit themselves to churning out two offspring in lieu of churning out three or more offspring to further amplify their posterity the total fertility rate was 2.3 children per woman in 2023 this is much lower than in the past in the 1950s it was more than twice as high 4.9 it is undesirable for a population to have a low natality to mortality ratio moreover it is also undesirable for a population to have a medium natality to mortality ratio as of march of 2025 it is estimated that a population needs to attain a natality to mortality ratio of at least 2.1.1 to maintain its population size this is not only because it takes two people a husband and a wife to procreate offspring but also because certain members of a population can pass away before reaching the age threshold for the average life expectancy of the population that they were born in when certain members of a population pass away before reaching the age threshold for the average life expectancy of the population that they were born in then it can have bearing on decreasing the average life expectancy of the population that they were born in as of march of 2025 it is estimated that a population needs to attain a natality to mortality ratio of over 2.1.1 to amplify its population size population growth in a population is inapt to transpire if the members of a population as an aggregate falter in their endeavor to attain a natality to mortality ratio of over 2.1.1 in their population the members of a population as an aggregate can falter in their endeavor to attain a natality to mortality ratio of over 2.1.1 in their population in contexts in which their population has a high mortality rate
