physicalism is a metaphysical thesis easily presented in slogan form there is nothing over and above the physical but notoriously difficult to formulate precisely understanding physicalism combines insights from contemporary philosophy of mind and metaphysics to present a new account of physical properties and metaphysical dependence and on this foundation develop a more rigorous and illuminating formulation of the thesis of physicalism

downward causation plays a fundamental role in many theories of metaphysics and philosophy of mind it is strictly connected with many topics in philosophy including but not limited to emergence mental causation the nature of causation the nature of causal powers and dispositions laws of nature and the possibility of ontological and epistemic reductions philosophical and scientific perspectives on downward causation brings together experts from different fields including william bechtel stewart clark and tom lancaster carl gillett john heil robin f hendry max kistler stephen mumford and rani lill anjum who delve into classic and unexplored lines of philosophical inquiry related to downward causation it critically assesses the possibility of downward causation given different ontological assumptions and explores the connection between downward causation and the metaphysics of causation and dispositions finally it presents different cases of downward causation in empirical fields such as physics chemistry biology and the neurosciences this volume is both a useful introduction and a collection of original contributions on this fascinating and hotly debated philosophical topic

what distinguishes good explanations in neuroscience from bad carl f craver constructs and defends standards for evaluating neuroscientific explanations that are grounded in a systematic view of what neuroscientific explanations are descriptions of multilevel mechanisms in developing this approach he draws on a wide range of examples in the history of neuroscience e g hodgkin and huxleys model of the action potential and ltp as a putative explanation for different kinds of memory as well as recent philosophical work on the nature of scientific explanation readers in neuroscience psychology the philosophy of mind and the philosophy of science will find much to provoke and stimulate them in this book

this monograph examines the metaphysical commitments of the new mechanistic philosophy a way of thinking that has returned to center stage it challenges a variant of reductionism with regard to higher level phenomena which has crystallized as a default position among these so called new mechanists furthermore it opposes those philosophers who reject the possibility of interlevel causation contemporary philosophers believe that the explanation of scientific phenomena requires the discovery of relevant mechanisms as a result new mechanists are in the main concerned solely with epistemological questions but the author argues their most central claims rely on metaphysical assumptions thus they must also take into account metaphysics a system of thought concerned with explaining the fundamental nature of being and the world around it this branch of philosophy does indeed matter to the empirical sciences the chapters investigate the nature of mechanisms their components and the ways in which they can bring about different phenomena in addition the author develops a novel account of causation in terms of activities the analysis provides the basis for many further research projects on mechanisms and their relations to for example the mind body problem realization multiple realization natural kinds causation laws of nature counterfactuals and scientific levels

substance and the fundamentality of the familiar explicates and defends a novel neo aristotelian account of the structure of material objects while there have been numerous treatments of properties laws causation and modality in the neo aristotelian metaphysics literature this book is one of the first full length treatments of wholes and their parts another aim of the book is to further develop the newly revived area concerning the question of fundamental mereology the question of whether wholes are metaphysically prior to their parts or vice versa inman develops a fundamental mereology with a grounding based conception of the structure and unity of substances at its core what he calls substantial priority one that distinctively allows for the fundamentality of ordinary medium sized composite objects he offers both empirical and philosophical considerations against the view that the parts of every composite object are metaphysically prior in particular the view that ascribes ontological pride of place to the smallest microphysical parts of composite objects which currently dominates debates in metaphysics philosophy of science and philosophy of mind ultimately he demonstrates that substantial priority is well motivated in virtue of its offering a unified solution to a host of metaphysical problems involving material objects

pritchard provides a deliberate and convincing argument for a starting point for the discussion of moral development on in which self regard and empathy provide equally essential groundings for individual morality drawing essential elements from the work of reid strawson rawls kohlberg and gilligan he builds a comprehensive framework for tracing moral development from childhood one that allows human morality to be grounded in both reason and emotion and that recognizes the importance to morality of justice and rights as well as caring and responsibility

recalling toqqueville s exhortation for the french to look to america for a better understanding of their own government john rohr returns the favor by revealing how much we can learn about american constitutionalism from a close study of french governance the french and american republics both emerged from the same revolutionary era and share a common commitment to separation of powers rule of law and republicanism even so the two constitutional traditions are quite different france after all has replaced its constitution at least thirteen times since 1789 while the american constitution has endured essentially intact yet as rohr shows french constitutionalism merits our careful attention focusing upon the founding of the french fifth republic and the drafting of its constitution rohr compares the nations

divergent approaches to executive legislative and judicial power independent administrative authority and discretion and the relation of administrative law to statutory law his analysis of france s divided versus our unified executive the two presidents exceptional powers and their influence on the legislative process provides particularly fresh insights into how the two constitutional traditions promote and inhibit the capacity for administrative action rohr shows that french administrative institutions are much more thoroughly developed than their american counterparts due to recurrent presidential and constitutional crises without such a strong public administration daily life in france would likely be extremely unstable if not quite chaotic the proper role of the french institutions he suggests is largely determined by their relationship to elected officials whereas their american counterparts are essentially shaped by the constitutional order a model for future comparative work in constitutional law and public administration rohr s study should help us see that the constitutional path we ve pursued wasn t the only possibility and why we ve chosen that route nevertheless as such it should have great appeal for students teachers and practitioners in u s and french law politics and public administration
