turkey has always been a crossroads and therefore offers an ideal location to study interaction between individuals and human communities and societies through time interaction has always necessarily involved movement which in turn did not occur randomly in the landscape but was instead focused on routes and roads that secured faster and easier connections there is substantial evidence that exchange networks already existed in anatolia at least since the neolithic period with goods traveling over long distances from the second millennium bc onwards textual evidence has improved understanding of traveling routes the roman long distance road network has been a focus of research over decades but local roads and pathways around individual sites are still mostly unknown byzantine roads have also received attention whereas the seljuk road and routes system is less well known it is likely that the younger roads and routes are overlying older ones at least partially but these palimpsests of older roads are hardly researched in this volume experts from different disciplines using a variety of methods and approaches aim to transcend the present fragmentation of knowledge and create a new level of understanding of connecting road and route systems in anatolia throughout time for the first time

this book accounts for the tumultuous period of the fifth to eleventh centuries from the fall of rome and the collapse of the western roman empire through the breakup of the eastern roman empire and loss of pan mediterranean rule until the turks

arrived and seized anatolia the volume is divided into a dozen syntheses that each addresses an issue of intrigue for the archaeology of anatolia and two dozen case studies on single sites that exemplify its richness anatolia was the only major part of the roman empire that did not fall in late antiquity it remained steadfast under roman rule through the eleventh century its personal history stands to elucidate both the emphatic impact of roman administration in the wake of pan mediterranean collapse thanks to byzantine archaeology we now know that urban decline did not set in before the fifth century after anatolia had already be thoroughly christianized in the course of the fourth century we know now that urban decline as it occurred from the fifth century onwards was paired with rural prosperity and an increase in the number size and quality of rural settlements and in rural population that this ruralization was halted during the seventh to ninth centuries when anatolia was invaded first by the persians and then by the arabs and the population appears to have sought shelter behind new urban fortifications and in large cathedrals further it elucidates that once the arab threat had ended in the ninth century this ruralization set in once more and most cities seem to have been abandoned or reduced to villages during the ensuing time of seeming tranquility whilst the countryside experienced renewed prosperity that this trend was reversed yet again when the seljuk turks appeared on the scene in the eleventh century devastated the countryside and led to a revival and refortification of the former cities this dynamic historical thread traced across its extremes through the lens of byzantine archaeology speaks not only to the torrid narrative of byzantine anatolia but to the enigmatic medievalization

the creation of a model to explain the transforms between behaviour and material remains is the underlying structuring principle of ethnoarchaeology despite the value of this interpretative paradigm for archaeology in broadening the interpretative bases upon which archaeological analysis is carried out very few studies have focused on the near east the

approach taken by this research project has attempted to characterise similarities and differences in each of the settlement levels at the ancient mound site of sos hoyuk analogy is drawn between the processes and conditions that structure lived behaviour in a modern village setting and the patterning left behind by such processes in the past although the village of yigittasi is located on the same site as the ancient settlements of sos hoyuk there is no simple correspondence between modern and ancient

this book is a publication of the acts of a symposium held at the nino in 2008 on the archaeology of the countryside in medieval anatolia the articles examine different aspects of the medieval anatolian countryside which prior to this symposium had not been a separate focus of research the articles largely concentrate on the results of recent excavations or archaeological and architectural surveys and include more general overviews of sites as well as specialized studies focusing on different aspects such as pottery mortuary practices and paleoecology all of the different studies demonstrate the complexity and diversity of the medieval anatolian countryside

this title provides comprehensive overviews on archaeological philological linguistic and historical issues at the forefront of anatolian scholarship in the 21st century

this volume presents a framework for interpreting cultural development in the highlands of anatolia from the earliest settlements to the recent past begun in 1988 investigations by the university of melbourne in cooperation with the erzurum museum have studied how past human societies adapted to and modified highland environments after considerations of concepts such as frontiers borders and boundaries that can be easily applied to north east anatolia the study moves to an analysis of the complex literary tradition with a view to detailing an historical geography of the bayburt and erzurum regions the ethnicity of the diauehi the identification of sinoria of mithradates fame and a new proposal for the route taken by xenophon and his 10 000 troops are among the novel ideas now associated with this once neglected region the second part deals with material culture beginning with an environmental conspectus the study presents the results of a survey carried

out in bayburt during 1988 and 1990 93 an ample catalogue of finds supplements a detailed register of sites to ensure comprehensiveness as complete a ceramic sequence for north east anatolia as is possible to prepare at this stage is also provided using both textual and archaeological data this study provides an extensive yet holistic picture of cultural change in the highlands as such it provides a valuable resource for the study of the antiquity of east anatolia and neighbouring lands

this study presents both the technological aspects of iron and iron making in north east anatolia as well as commenting on the socio economic political and symbolic aspects of metallurgy in the first instance a technical study of iron objects from two north east anatolian highland sites buyuktepe hoyuk bayburt and sos hoyuk erzurum is presented these results are compared with the status and production of iron in the early and late iron age periods in eastern anatolia generally what emerges is a significant exposition of the use of iron and changes in its use throughout the first millennium bc and strong indications that some iron making traditions in this region were idiosyncratic when compared to the rest of the near east in line with more recent discussions this study also interprets the results in terms of human behaviour given the seasonality of human activity in the highlands and the likelihood of comparatively small scale production units it was appropriate to consider that iron and industrialisation were not always interdependent in antiquity using ethnographic considerations survey and textual evidence of settlement patterns the basis of post urartian iron manufacture is inferred to be small scale not surpassing the immediate needs of the community to generate inter local trade or exchange nonetheless considerable community organisation and effort are reflected in the material characteristics of the iron objects examined in particular those objects that demanded a high standard of skill and perseverance even by modern standards are strong indicators of an extensive and established crafting tradition

this volume brings together the latest reports on archaeological projects including excavation and survey from all periods and every region of anatolia it is a forum in which scholars present their most recent data to a global audience allowing for productive engagement with others working in and near anatolia regarding discoveries and interpretations the series offers a venue where recently concluded projects may provide an overview of results often years ahead of the final publication of complete site reports published every two years the archaeology of anatolia recent discoveries series is an invaluable vehicle through which working archaeologists may carry out their most critical task the presentation of their fieldwork and laboratory research in a timely fashion

this volume is devoted to the search for borders in archaeology and takes as a case study the archaeology of anatolia and the south caucasus in the bronze and iron ages up until the mid first millennium bce these regions differ in interregional and macro regional interactions political complexity economic and mobility strategies and communication of identities among which is the use and spread of writing through time they are united by their representation in ancient sources and modern literature as borderlands these features represent the core of the discussion developed in the volume chapters include theoretical discussion of borders and boundaries and regional investigations of the early middle and late bronze age assyrian colony period hittite empire in anatolia kura araxes trialeti vanadzor van urmia and other traditions in the south caucasus the early iron age and middle iron age troy phrygia urartu until the unification under the achaemenid empire they offer a balanced interplay between site based investigations and landscape archaeology in armenia azerbaijan georgia and turkey
