a valuable new edition of a standard reference the use of statistical methods for categorical data has increased dramatically particularly for applications in the biomedical and social sciences an introduction to categorical data analysis third edition summarizes these methods and shows readers how to use them using software readers will find a unified generalized linear models approach that connects logistic regression and loglinear models for discrete data with normal regression for continuous data adding to the value in the new edition is illustrations of the use of r software to perform all the analyses in the book a new chapter on alternative methods for categorical data including smoothing and regularization methods such as the lasso classification methods such as linear discriminant analysis and classification trees and cluster analysis new sections in many chapters introducing the bayesian approach for the methods of that chapter more than 70 analyses of data sets to illustrate application of the methods and about 200 exercises many containing other data sets an appendix showing how to use sas stata and spss and an appendix with short solutions to most odd numbered exercises written in an applied nontechnical style this book illustrates the methods using a wide variety of real data including medical clinical trials environmental questions drug use by teenagers horseshoe crab mating basketball shooting correlates of happiness and much more an introduction to categorical data analysis third edition is an invaluable tool for statisticians and biostatisticians as well as methodologists in the social and behavioral sciences medicine and public health marketing education and the biological and agricultural sciences

the book presents statistical methods and models that can usefully support the ev

uation of educational services and quality of products the contributions collected in this book summarize the work of several researchers from the universities of bologna firenze napoli and padova the contributions are written with a consistent notation and a unified view and concern methodological advances developed mostly with reference to specific problems of evaluation using real data sets the evaluation of educational services as well as the analysis of judgements and preferences poses severe methodological challenges because of the presence of one or more of the following aspects the observational non experimental nature of the context which is associated with the well known problems of selection bias and presence of nuisance factors the hierarchical structure of the data that entails correlated observations and consideration of effects at different levels of the hierarchy and their interactions multilevel analysis the multivariate and qualitative nature of the dependent variable that requires the use of ad hoc statistical methodologies the presence of non observable factors e.g. the satisfaction calling for the use of latent variables models the simultaneous presence of components of pleasure and components of uncertainty in the explication of the judgments that asks for the specification and estimation of mixture models the first part of the book deals with latent variable models

the goal of the second edition is to introduce the advance undergraduate or graduate student and more seasoned research scientists in any of the allied health sciences to a wide array of methodological and biostatistical issues as they occur in the context of both published and ongoing research some sixty four articles published between 1992 and 2002 have been selected from the journal of clinical and experimental neuropsychology the clinical neuropsychologist and child neuropsychology and reproduced in this volume while building upon a working knowledge and understanding of the basic univariate data analytic techniques and the research designs to which they apply the approach to the more complex multivariate techniques is presented primarily at a conceptual and essentially non mathematical level while the issue of the complexity of some of the more recent and standard approaches to data analytic strategies and their important role to specific research designs is important to convey there remains an even more fundamental issue of whether the results of correctly applied data analytic strategies make any practical or clinical sense above and beyond their having reached levels of statistical significance these critical issues are addressed throughout various

commentaries that the editors make at appropriate points in the text the volume will appeal to advanced undergraduate and graduate students as well as clinical neuropsychologists and research scientists in any of the allied health disciplines

this book is based on an oberwolfach seminar and it intends to give an introduction and an overview to several directions of the recent research on stochastic geophysical fluid dynamics and to discuss different geophysical stochastic partial differential equations
