differential diagnosis texts for the mrcp can overload candidates with detailed information, making revision seem difficult and overwhelming. In contrast, this book avoids exhaustive lists of often rare causes and concentrates instead on a maximum of five of the most common causes in terms of prevalence for each scenario, making revision more structured and manageable. The book includes diagnostic hints, clinical or lab clues that point towards a specific diagnosis, and a unique chapter on key ECG causes and features. Although primarily intended for mrcp part I and II and FCPS Pakistan part II candidates, this book will also be useful for undergraduate students preparing for finals.

A unique reference book covering the relevant basic sciences of cardiac anatomy, physiology, and pharmacology through to the initial clinical assessment and investigation. It covers the core curricula for paediatricians in training at all levels, including the MRCPI and DCH examinations. This book is relevant to paediatricians in training, general practitioners, emergency department staff, and specialist nurses. General staff working in specialist regional cardiac centres and healthcare professionals involved in the care of children and young people will also find this essential resource extremely useful. The aim of this handbook is to provide a rapid and reliable reference to congenital and acquired cardiac problems.
