wiring diagrams form a kind of graphical language that describes operations or processes with multiple inputs and outputs and shows how such operations are wired together to form a larger and more complex operation this monograph presents a comprehensive study of the combinatorial structure of the various operads of wiring diagrams their algebras and the relationships between these operads the book proves finite presentation theorems for operads of wiring diagrams as well as their algebras these theorems describe the operad in terms of just a few operadic generators and a small number of generating relations the author further explores recent trends in the application of operad theory to wiring diagrams and related structures including finite presentations for the propagator algebra the algebra of discrete systems the algebra of open dynamical systems and the relational algebra a partial verification of david spivak s conjecture regarding the quotient freeness of the relational algebra is also provided in the final part the author constructs operad maps between the various operads of wiring diagrams and identifies their images assuming only basic knowledge of algebra combinatorics and set theory this book is aimed at advanced undergraduate and graduate students as well as researchers working in operad theory and its applications numerous illustrations examples and practice exercises are included making this a self contained volume suitable for self

study

the subject electrical design estimating and costing covers an important functional area of an electrical diploma holder the subject is taught in various forms in different states in some states it is covered under two subjects namely electrical design drawing and electrical estimating costing in some states it is taught as an integrated subject but is split into two or three parts to be taught in different semesters to cater to the needs of polytechnics of different states the content of the course has been developed by consulting the curricula of various state boards of technical education in the country in addition to inclusion of conventional topics a chapter on motor control circuits has been included in this book this topic is of direct relevance to the needs of industries and as such finds prominent place in the curricula of most of the states of india the book covers topics like symbols and standards design of light and fan circuits alarm circuits panel boards etc design of electrical installations for residential and commercial buildings as well as small industries has been dealt with in detail in addition design of overhead and underground transmission and distribution lines sub stations and design of illumination schemes have also been included the book contains a chapter on motor circuit design and a chapter on design of small transformers and chokes the book contains theoretical explanations wherever required a large number of solved examples have been given to help students understand the subject better the authors have built up the course from simple to complex and from known to unknown examples have generally been taken from practical situations indeed students will find this book useful not only for passing examinations but even more during their professional career
