facilitating children's and adolescents' growth has been a challenge and major concern for person-centred work since the beginning of the approach in the 1940s. During the past decade, a shift in this domain has generated numerous new concepts, research, and practice, making a considerable impact on both the professional tasks and training of educators, counsellors, and psychotherapists. Fifteen original chapters and a foreword from Brian Thorne describe this development. The chapters began as presentations from a symposium at the Potsdam PCE 2006 World Association Conference, thus reflecting international perspectives emerging around the world today. Framed by two chapters from the editors, the book provides a comprehensive overview of state-of-the-art person-centred work with children, adolescents, and parents and identifies emerging themes in the field.

Interviewers face a dilemma when questioning children in a forensic context: an inherent mismatch between the needs of the legal system and the capabilities of young children. This is especially problematic when legal decisions with potentially serious consequences depend on the results of the interview, such as in cases involving eyewitness memory, divorce, and allegations of abuse and neglect. Without accommodations to a child's developmental level, interviews can result in false reports, miscommunication, and misinterpretation. Despite an interviewer's best intentions, evidence-based child forensic interviewing addresses this discrepancy and presents an innovative approach to close the gap by providing the scaffolding structure and guidance children need to perform optimally. Created by Drs. Karen J. Saywitz and Lorinda B. Camparo and outlined in this guide, the Developmental Narrative Elaboration (DNE) interview is an evidence-based, step-by-step process and set of techniques for forensic contexts designed to help children ages 3–12 accurately tell as much as they can about their experiences and perceptions. The DNE is comprised of a developmentally sensitive core template and optional techniques that can be embedded at the interviewer's discretion as cases unfold. This book reviews the relevant research and then, with sample

language transcripts and suggested activities details a three phased interview with examples this empirically supported guide is designed to meet the needs of both novice and seasoned professionals in mental health social service law enforcement and the legal system when children s input is needed for legal and social service decision making
