What is a seed and what are its advantages Seed A structure that contains a plant embryo a food supply endosperm and a protective coat Advantages Protection The seed coat protects the embryo from desiccation mechanical damage and pathogens Dormancy Seeds can remain dormant until favorable conditions exist for germination Dispersal Seeds can be dispersed by wind water or animals allowing the plant to colonize new areas Food Supply The endosperm provides nutrients for the developing embryo allowing it to survive until it can photosynthesize on its own B Which groups of plants produce seeds Gymnosperms Naked Seed Plants Conifers cycads ginkgoes Angiosperms Flowering Plants All flowering plants IV The Evolution of Flowers and Fruits The Key to Angiosperm Success A What are the key features of flowers Sepals Protect the flower bud before it opens Petals Often brightly colored and fragrant to attract pollinators Stamens Produce pollen which contains the male gametes Pistil Contains the ovary which houses the ovules female gametes B What is the role of fruits in angiosperm reproduction Fruits Develop from the ovary after fertilization and typically enclose the seeds Role Help disperse seeds by attracting animals through fleshy fruits or by being dispersed by wind or water dry fruits C What are the advantages of flowers and fruits for angiosperms Increased Pollination Efficiency Flowers attract pollinators which increase the likelihood of fertilization Seed Dispersal Fruits aid in seed dispersal allowing angiosperms to colonize new areas Coevolution with Animals The development of flowers and fruits has led to coevolutionary relationships with animals benefiting both parties V Adaptations for Life on Land A Summary 4 A Summarize the key adaptations that enabled plants to colonize land Vascular Tissue Allowed for efficient transport of water and nutrients Seeds Provided protection dormancy and dispersal for embryos Flowers and Fruits Increased pollination efficiency and facilitated seed dispersal Cuticle A waxy covering that helps prevent water loss Stomata Pores on leaves that allow for gas exchange B What are the major trends in plant evolution and what are the implications of these trends Increased Complexity Plants have evolved from simple nonvascular bryophytes to complex vascular plants with seeds flowers and fruits Diversification The plant kingdom has diversified into a wide range of species adapted to diverse environments Coevolution Plants have coevolved with animals leading to mutualistic relationships that have driven plant evolution Conclusion The colonization of land by plants was a major evolutionary event that has had a profound impact on the biosphere Through a series of key adaptations plants have become the dominant life forms on Earth providing oxygen food and habitat for countless other organisms Understanding the evolution of plants provides insights into the remarkable diversity of life on Earth and highlights the importance of adaptation and coevolution in driving the evolution of species
