cosmic inflation and dark energy hold the key to the origin and the eventual fate of the universe despite the increasing prominence of these subjects in research and teaching over the past decade or more no introductory textbook dedicated to these topics has

been previously published dr konstantinos dimopoulos is a highly regarded expert in the field and an experienced communicator of the subject to students in this book he provides advanced undergraduate and early graduate students with an accessible introduction and equips them with the tools they need to understand the cosmology of cosmic inflation and dark energy features provides a concise pedagogical crash course in big bang cosmology focusing on the dynamics and the history of the universe with an emphasis on the role of dark energy chapters contain questions and problems for readers to test their understanding the first book to make cosmic inflation and dark energy accessible to students

the second edition of this selecta of my work on the stability of matter was sold out and this presented an opportunity to add some newer work on the quantum mechanical many body problem in order to do so and still keep the volume within manageable limits it was necessary to delete a few papers that appeared in the previous editions this was done without sacrificing content however since the material contained in the deleted papers still appears in abbreviated form at least in other papers reprinted here sections vii and viii are new the former is on quantum electrodynamics qed to which i was led by consideration of stability of the non relativistic many body coulomb problem as contained in the first and second editions in particular the fragility of stability of matter with classical magnetic fields which requires abound on the fine structure constant even in the non relativistic case item v 4 leads to the question of stability in a theory with quantized fields there are many unresolved problems of qed if one attempts to develop a non perturbative theory as everyone knows a non perturbative theory is essential however if one is going to understand the stability of the many body problem which is the stability of ordinary matter some physicists will say that a non perturbative qed does not exist and this might be true in the absence of cutoffs but an effective theory with cutoffs of a few mev must exist since matter exists

nearly forty of the world s most esteemed scientists discuss the big questions that drive their illustrious careers co editor eduardo punset one of spain s most loved personages for his popularization of the sciences interviews an impressive collection of characters drawing out the seldom seen personalities of the world s most important men and woman of science in mind life and universe they describe in their own words the most important and fascinating aspects of their research frank and often irreverent these interviews will keep even the most casual reader of science books rapt for hours can brain science explain feelings of happiness and despair is it true that chimpanzees are just like us when it comes to sexual innuendo is there any hard evidence that life exists anywhere other than on the earth through punset s skillful questioning readers will meet one scientist who is passionate about the genetic control of everything and another who spends her every waking hour making sure african ecosystems stay intact the men and women assembled here by lynn margulis and eduardo punset will provide a source of endless interest in captivating conversations with such science luminaries as jane
