practices of comparing shape how we perceive, organize, and change the world. supposedly innocent practices of comparing play a decisive role in forming categories, boundaries, and hierarchies, but they can also give an impetus to question and change such structures. Like almost no other human practice, comparing pervades all social, political, economic, and cultural spheres. This volume outlines the program of a new research agenda that places comparative practices at the center of an interdisciplinary exploration. Its contributions combine case studies with overarching systematic considerations. They show what insights can be gained and which further questions arise when one makes a seemingly trivial practice, comparing, the subject of in-depth research.

a thorough, accessible, and general overview of chemosensors providing a comprehensive overview of chemosensors: organic molecules designed to bind and sense small molecules or metal ions and their applications; chemosensors: principles, strategies, and applications. the immunohistochemical visualization of peptide-containing neurons forms the basis of most chapters in volume 4. The volume deals with the structural organization of neuropeptide-containing neuronal systems in the CNS as revealed primarily by the immunohistochemical technique. The volume also includes a major chapter on GABA neurons in the CNS as revealed by an antiserum against GAD. This chapter gives a unique overview of putative GABAergic neurons in the CNS and contains a wealth of previously unpublished material, including the first complete mapping of GAD in the rat CNS. Thus, this volume supplements and equals the well-received information in the first three volumes in the series.
