this edited collection is the first complete guide for rehabilitation professionals seeking to engage a whole person biopsychosocial and mind body medicine integrated approach to care drawing on the foundations of integrative medicine integrative rehabilitation practice irp goes beyond the treatment of symptoms to explore multiple levels roots and possible contributing factors to individual s health experience irp acknowledges the complex inseparability of biological behavioral psychosocial spiritual and environmental influences the book covers both the theoretical foundations of irp and applications to practice in the fields of physical therapy occupational therapy yoga therapy speech and language therapy and many other professions featuring contributions from matthew j taylor marlysa sullivan andra devoght and other professionals case studies storytelling and reflective exercises this cross disciplinary clinical training guide is essential reading for all rehabilitation professionals as well as others interested in advancing whole person care

the current volume focuses on several key aspects of mind brain body interactions in health and disease including specific examples of interactions between body and brain mechanisms underlying the response of the system to stressors the role of early life events in permanently biasing the responsiveness of the system and practical implications of mind body interactions in human disease the volume on biological basis for mind body interactions is organized into 6 major sections each dealing with a unique aspect of the general topic after establishing the relationship between mind brain and emotions the first section deals with general neurobiological aspects mediating the effect of stress on various organ systems including the immune and cardiovascular system the second section covers the topic of how early life stressor can permanently alter responsiveness of the nervous system in animals and in man the third section deals with influences of the internal environment mediated by neuroendocrine and visceral afferent pathways on the cns the fourth section which deals with influences of body on the brain focuses on mechanisms involved in perception and modulation of pain the fifth section deals with influences of the mind brain on the body with an emphasis on central and peripheral mechanisms of autonomic control of body functions the last section deals with a series of practical issues of mind body treatments including acupuncture breathing body work and meditation in addition issues such as cost effectiveness and research aspects are discussed authors in this last section frequently refer to topics and mechanisms addressed in the early sections making it a truly integrated volume the unique aspect of the volume is the

integration of state of the art research information on biological and practical aspects of mind brain body interactions it is based on the beliefs of the editors and participants that the traditional separation of mind and body in research and in treatment of human disease is obsolete and needs to be replaced with a new unifying paradigm ironically this evolving paradigm shares many similarities with ancient pre cartesian paradigms of health and disease

although considerable progress has been made in the understanding and treatment of a range of medical disorders it had recently been pointed out that 85 percent of the population will be stricken by chronic disorders which may be accompanied by many years of suffering this volume deals with issues of both cure and risk in chronic illnesses which are among the group of disorders associated with the leading causes of death in the united states at this time alzheimer s disease aids and cancer a consideration of the role of brain and behavior in relation to the cure and prevention of these disorders is the central focus of the various chapters in this book several chapters discuss the neuropsychological aspects of chronic illnesses including the underlying pathophysiology of changes in the brain which may be associated with both behavioral and physical signs and symptoms in these disorders considerable evidence suggests that a range of psychosocial or behavioral factors such as stressful life events and depression are associated with increased morbidity or mortality complex neurobiological pathways involving the brain neurotransmitter and neuroendocrine systems have been implicated other chapters consider some of the links among brain behavior and chronic illnesses as well as psychological factors such as coping and depression in relation to chronic disorders the three leading risk factors known to be associated with both chronic illnesses and death diet tobacco and alcohol are all related to behavioral choices sexual behavior can be added to the list in terms of hiv infection and acquired immunodeficiency disease aids several chapters deal specifically with a consideration of sexual behavior and hiv infection which clearly highlight the need for scientific knowledge in human sexuality if effective long term preventive measures are to be developed while waiting for a vaccine or cure the search for cures must continue to have the highest priority in the scientific and clinical struggle against disease nonetheless the value of psychosocial interventions on the quality of life and mental states of seriously ill persons should not be underestimated

behavioral medicine is a newly integrated discipline and it is anticipated that it will serve as an indispensable tool in clinical medicine and public health as well as in basic human sciences the twelfth international symposium of the university of tokyo todai was aimed at exchanging state of the art information on ongoing studies in the following areas of behavioral medicine psychoneuroimmunology cardiovascular reactivity work stress acquired immunodeficiency syndrome aids international health new health indicator and other major topics a total of 47 papers are published in this proceedings volume all of which were reviewed by an international

group of scientific peer reviewers
