endorsed by the society of light and lighting this practical book offers comprehensive guidance on how colour light and contrast can be incorporated within buildings to enhance their usability. The book provides state of the art clear guidance as well as a valuable information source for busy professionals involved in the design or management of new and existing environments. The ways colour, light and contrast are used within built environments are critical in determining how people interact with the space and how confident, safe and secure they will feel when doing so. They also have a major influence on a person's sense of well-being and their ability to use the environment independently and without undue effort. Understanding how to use colour and contrast and how they are influenced by both natural and artificial lighting is vital for all those involved in the design and management of the environments and spaces we all use. In recent years there has been a considerable amount of work undertaken to further our understanding of how colour, light and contrast affect emotion and sensory abilities and how they can assist or hinder people in their everyday lives. Other publications consider these issues individually but the colour, light and contrast manual designing and managing inclusive built environments draws knowledge and information together to produce a unique, comprehensive and informative guide to how the three elements can work together to improve the design and management of environments for us all. A shelter is one of the physiological needs according to Maslow's hierarchy of needs, which lies at the bottom of the pyramid. People spend around 90% of their time in shelters or, in today's words, buildings. They sleep, eat, work, relax, exercise, play, are born and die in these buildings. In fact, they live within walls; therefore, an indoor environment is crucial for their health and safety. This book therefore addresses the issues related to the impact of a sustainable, healthy and comfortable indoor environment on the quality of life and perceives the required indoor conditions for productivity and effectiveness. Thereby, this book is designed to include issues and extensive discussions on thermal comfort, indoor air quality, visual comfort, acoustic comfort, productivity and indoor health and safety. The concepts of heating, ventilation, air conditioning, external temperature, air pollution, sick building, indoor pollutants, illumination, glare, indoor lighting, daylight, noise, construction materials, sound intensity and furniture on the indoor environment are described in detail in this book.

The second edition of Sustainable Construction provides a masterclass on the principles and techniques involved in the design and delivery of practical, affordable, high-quality sustainable buildings and places. It presents precedents, theory, concepts and principles alongside 120 wide-ranging case studies that highlight current best practice and encourage implementation. Topics in the book include the history of ideas in sustainable construction, policy, materials, cost, appraisal, techniques, environmental design, energy, water, construction processes and urban ecology. The book is heavily illustrated in full colour and is an ideal, contemporary, accessible primer to courses in architecture, construction, building engineering, environmental engineering, project management, landscape, urbanism and development.
