problems to test your understanding

**Problem 1** Find the equivalent resistance of the following circuit Include a simple circuit diagram with resistors in series and parallel

**Problem 2** Using KVL and KCL find the current flowing through each resistor in the following circuit Include a more complex circuit diagram with multiple voltage sources and resistors

**Problem 3** Apply nodal analysis to find the voltage at each node in the following circuit Include a circuit diagram suitable for nodal analysis

**Problem 4** Use Thevenin's theorem to find the Thevenin equivalent circuit seen by the load resistor  $R_L$  Include a circuit with a load resistor and various other components

**Solutions** Provide detailed step-by-step solutions for each problem emphasizing the application of relevant theorems and laws

**Strategies for Effective Practice** Start with simpler problems Build your confidence and understanding by starting with basic circuits before tackling more complex ones Work through textbook examples Pay close attention to the steps involved in solving the examples provided in your textbook Use online resources Many websites and online platforms offer circuit analysis practice problems and tutorials Form study groups Collaborating with peers can help you understand concepts better and identify areas where you need more help

**Time yourself** Practice solving problems under timed conditions to simulate the exam environment

**III Exam Preparation Tips**
