by using pullbacks we obtain a description of finitely generated modules over the integral group ring of a non abelian group of order italic pq the description is detailed enough to obtain information about the behavior of the modules in direct sums we make the description more precise by relating it to the locally free class group of the integral group ring

to the uninitiated algebraic topology might seem fiendishly complex but its utility is beyond doubt this brilliant exposition goes back to basics to explain how the subject has been used to further our understanding in some key areas a number of important results in combinatorics discrete geometry and theoretical computer science have been proved using algebraic topology while the results are quite famous their proofs are not so widely understood this book is the first textbook treatment of a significant part of these results it focuses on so called equivariant methods based on the borsuk ulam theorem and its generalizations the topological tools are intentionally kept on a very elementary level no prior knowledge of algebraic topology is assumed only a background in undergraduate mathematics and the required topological notions and results are gradually explained

this book is devoted to the structure of the absolute galois groups of certain algebraic extensions of the field of rational numbers its main result a theorem proved by the authors and florian pop in 2012 describes the absolute galois group of distinguished semi local algebraic and other extensions of the rational numbers as free products of the free profinite group on countably many generators and local galois groups this is an instance of a positive

answer to the generalized inverse problem of galois theory adopting both an arithmetic and probabilistic approach the book carefully sets out the preliminary material needed to prove the main theorem and its supporting results in addition it includes a description of melnikov s construction of free products of profinite groups and for the first time in book form an account of a generalization of the theory of free products of profinite groups and their subgroups the book will be of interest to researchers in field arithmetic galois theory and profinite groups
