this book addresses themes in the newly emerging discipline of philosophy of chemistry in particular issues in connection with discussions in general philosophy of science on natural kinds reduction and ceteris paribus laws the philosophical issue addressed in all chapters is the relation between on the one hand the manifest image the daily practice or common sense life form and on the other the scientific image both of which claim to be the final arbiter of everything with respect to chemistry the question raised is this where does this branch of science fit in with the manifest or scientific image most philosophers and chemists probably would reply unhesitatingly the scientific image the aim of this book is to raise doubts about that self evidence it is argued that chemistry is primarily the science of manifest substances whereas micro or submicro scientific talk though important useful and insightful does not change what matters namely the properties of manifest substances these manifest substances their properties and uses cannot be reduced to talk of molecules or solutions of the schrödinger equation if submicroscopic quantum mechanics were to be wrong it would not affect all or any microlevel chemical knowledge of molecules if molecular chemistry were to be wrong it wouldn't disqualify knowledge of say water not at the macrolevel e g its viscosity at 50 c nor at the pre or protoscientific manifest level e g ice is frozen water

accounts in drug discovery describes recent case studies in medicinal chemistry with a particular emphasis on how the inevitable problems that arise during any project can be surmounted or overcome the editors cover a wide range of therapeutic areas and medicinal chemistry strategies including lead optimization starting from high throughput screening hits as well as rational structure based design the chapters include follow ons and next generation compounds that aim to improve upon first generation agents this volume surveys the range of challenges commonly faced by medicinal chemistry researchers including the optimization of metabolism and pharmacokinetics toxicology pharmaceutics and pharmacology including proof of concept in the clinic for novel biological targets the case studies include medicinal chemistry stories on recently approved and marketed drugs but also chronicle near misses i e exemplary compounds that may have proceeded well into the clinic but for various reasons did not result in a successful registration as the vast majority of projects fail prior to registration much can be learned from such narratives by sharing a wide range of drug discovery experiences and information across the community of medicinal chemists in both industry and academia we believe that these accounts will provide insights into the art of medicinal chemistry as it is currently practiced and will help to serve the needs of active medicinal chemists

packed with real world examples this book illustrates the 12 principles of green chemistry these diverse case studies demonstrate to scientists and students that beyond the theory the challenges of green chemistry in pharmaceutical discovery and development remain an ongoing endeavor by informing and welcoming additional practitioners to this m
