Energy and Environmental Law and Policy Series 41. We know the science of climate change, we know the economics of climate change, we also know the law of climate change. However, we do not know how countries may come together to cooperate on climate change mitigation. In this connection, the role of international trade in climate change, although universally acknowledged, is not well understood. This groundbreaking book by one of the world's foremost authorities on international economic law not only investigates this role in great depth but also explains how free trade agreements can be used as a powerful tool to help mitigate climate change, focusing on the idea of climate clubs, namely the coalition of the willing among governments, companies, and/or international institutions. The book offers insightful analysis on aspects of the trade-climate linkage, such as formation of climate clubs, legitimacy and accountability, technological cooperation, green patents, how competition law hinders effective cooperation between companies seeking to produce sustainable goods, domestic policy preferences, recognizing states that should legitimately be allowed to be free riders, and sanctions for noncompliance. Three detailed case studies are included: a comparison of the U.S. and European Union (EU) generalized system of preferences (GSP) programs, energy security in the Arab world, and EU-Russia energy trade relations. With the author's conviction that global access to energy, mitigating climate change, and benefit from international trade and investment all can be achieved, this book offers a fresh understanding of the international trading system as a way to reach a prosperous, modern, and sustainable society that will help decarbonize the economy effectively. It will be welcomed by all professionals and policymakers concerned with climate change mitigation and particularly by those active at its nexus with international trade.

Energy intersects with the environment at all stages of its life cycle by affecting nature and public health and is subject to government measures concerning low-carbon growth, energy efficiency, and conservation, renewable energy, and ecologically safe supply of nuclear and other energy resources. This timely book provides a comprehensive analysis of the role of international economic law in regulating such an energy-environment nexus under the regimes of the WTO, the Energy Charter Treaty, regional trade agreements, and investment treaties. The author discusses the international environmental and economic law foundations of this nexus and extensively examines relevant rules, jurisprudence, and practices regarding trade restrictions, subsidies, technical standards, investment protection, and technology policies. This book highlights the existing gaps and greening solutions within the framework of international economic law. Where relevant, it draws comparisons between trade law and investment law to show their similarities, differences, and potential conflicts at the energy-environment interface.
