this book focuses on the analysis of eigenvalues and eigenfunctions that describe singularities of solutions to elliptic boundary value problems in domains with corners and edges the authors treat both classical problems of mathematical physics and general elliptic boundary value problems the volume is divided into two parts the first is devoted to the power logarithmic singularities of solutions to classical boundary value problems of mathematical physics the second deals with similar singularities for higher order elliptic equations and systems chapter 1 collects basic facts concerning operator pencils acting in a pair of hilbert spaces related properties of ordinary differential equations with constant operator coefficients are discussed and connections with the theory of general elliptic boundary value problems in domains with conic vertices are outlined new results are presented chapter 2 treats the laplace operator as a starting point and a model for the subsequent study of angular and conic singularities of solutions chapter 3 considers the dirichlet boundary condition beginning with the plane case and turning to the space problems chapter 4 investigates some mixed boundary conditions the stokes system is discussed in chapters 5 and 6 and chapter 7 concludes with the dirichlet problem for the polyharmonic operator chapter 8 studies the dirichlet problem for general elliptic differential equations of order $2m$ in an angle in chapter 9 an asymptotic formula for the distribution of eigenvalues of operator pencils corresponding to general elliptic boundary value problems in an angle is obtained chapters 10 and 11 discuss the dirichlet problem for elliptic systems of differential equations of order 2 in an n dimensional cone chapter 12 studies the neumann problem for general elliptic systems in particular with eigenvalues of the corresponding operator pencil in the strip $m \leq \operatorname{Re} \lambda \leq 2n - m$ it is shown that only integer numbers contained in this strip are eigenvalues applications are placed within chapter introductions and as special sections at the end of chapters prerequisites include standard pde and functional analysis courses

ganit mathematics series consists of ten textbooks two textbooks for primer a and b eight textbooks for classes 1 8 this series is strictly bases on the syllabus prescribed by the council for the indian school certificate the series has been developed to guide the young minds to observe and experience mathematics all around them each concept has been related to everyday life in order to develop a spirit of curiosity and discovery concepts are gradually built up with easy to follow steps and plenty of examples
