discussing the future of energy production and management in a changing world this book contains the proceedings of the
 first international conference on energy production and management in the 21st century the quest for sustainable energy
 developed societies require an ever increasing amount of energy resources which creates complex technological challenges
 the idea is to compare conventional energy sources particularly hydrocarbons with a number of other ways of producing
 energy emphasising new technological developments the challenge in many cases is the conversion of new sources of
 energy into useful forms while finding efficient ways of storing and distributing energy energy policies and management are of
 primary importance to achieving sustainability and need to be consistent with recent advances made in energy production
 and distribution the book will also discuss the energy use of industrial processes including the imbedded energy contents of
 materials particularly those in the built environment energy production distribution and usage result in environmental risks
 which need to be better understood they are part of the energy economics and relate to human environmental health as well
 as ecosystems behaviour topics covered include energy production energy management energy policies energy and
 economic growth energy efficiency hydropower wind energy solar energy nuclear energy biomass and biofuels energy
