loss models from data to decisions fifth edition continues to supply actuaries with a
practical approach to the key concepts and techniques needed on the job with updated
material and extensive examples the book successfully provides the essential methods for
using available data to construct models for the frequency and severity of future adverse
outcomes the book continues to equip readers with the tools needed for the construction
and analysis of mathematical models that describe the process by which funds flow into
and out of an insurance system focusing on the loss process the authors explore key
quantitative techniques including random variables basic distributional quantities and the
recursive method and discuss techniques for classifying and creating distributions
parametric non parametric and bayesian estimation methods are thoroughly covered
along with advice for choosing an appropriate model throughout the book numerous
examples showcase the real world applications of the presented concepts with an
emphasis on calculations and spreadsheet implementation loss models from data to
