the few models on safety management that are available tend to explain a procedure to manage safety rather than a safety management system the research carried out here however models safety management by transforming a common procedural model i e the hse s model 1997 into a functional systems representation the overall goal of the model is to offer clear graphic lines of influence of its different components on organisational safety the model is innovative not in the components that it considers but in the representation of those components which details relative distances between elements and therefore opens doors to model driven hypotheses which account for those distances therefore hypotheses are more accurate in their predictions this model is firstly explored in the construction sector results from this exploratory research support the adequacy of the model to understanding safety management and encourage future research of a more confirmatory nature

a systems approach to small group interaction pioneered the systems approach and is the only book that integrates all important small group topics into a single comprehensive conceptual model the text also features a unique systematic organization each chapter begins with a brief preview followed by a glossary of terms a real life case study and then the chapter text material next comes several experiential exercises for skill development and finally the chapter concludes with two original readings
