Coaches and trainers have a responsibility to promote a culture of fair play, educate athletes about the risks associated with drug use, and prioritize the long-term health and wellbeing of individuals.

**3 Best Practices for Conditioning for Strength and Human Performance**

- 1. Establish Clear Goals** The starting point for any conditioning program is to establish clear and achievable goals. Goals should be specific, measurable, attainable, relevant, and time-bound (SMART). This ensures focus, motivation, and a framework for progress.
- 2. Develop a Comprehensive Training Plan** The training plan should be tailored to individual needs, goals, and limitations. It should include a balanced mix of strength training, cardio, flexibility, and mobility exercises, along with appropriate recovery protocols.
- 3. Utilize Periodization Principles** Periodization involves systematically varying training volume, intensity, and frequency over time to maximize adaptation and performance. This approach allows for periods of high-intensity training interspersed with periods of lower intensity and recovery, promoting sustained progress.
- 4. Prioritize Progressive Overload** Progressive overload is the principle of gradually increasing the demands placed on the body over time. This can be achieved by increasing weight, repetitions, sets, or exercise difficulty, ensuring continued adaptation and strength gains.

- 6. Embrace Active Recovery** Active recovery involves light physical activity performed between training sessions to promote blood flow, flush out waste products, and enhance recovery. Activities like walking, swimming, or light cycling can be effective tools for active recovery.
