the constructed other argues that the assumed otherness of japanese architecture has made it both a testbed for western architectural theories and a source of inspiration for western designers the book traces three recurring themes in western accounts of japanese architecture from the reopening of japan in the mid nineteenth century to the present day a wish to see western architectural theories reflected in japanese buildings efforts to integrate elements of japanese architecture into western buildings and a desire to connect contemporary japanese architecture with japanese tradition it is suggested that together these narratives have had the effect of creating what amounts to a mythical version of japanese architecture often at odds with historical fact but which has exercised a powerful influence on the development of building design internationally

japanese architecture and design acquired international prominence in the so called bubble economy era of the 1980s japanese products from automobiles to electronic equipment were sold in record numbers the world over and japanese brand names became synonymous with high quality now that the boom of the 1980s has given way to a recession what is the country's designed and built environment like and what are the factors that determine it this attractive volume and the traveling exhibition it accompanies seek to address these questions essays written by experts in their fields are accompanied by impressive color plates to present japanese architecture and design of the 1990s to a western readership for the first time book jacket title summary field provided by blackwell north america inc all rights reserved
