Computational Linguistics (CL) This rapidly growing field applies computational methods to linguistic problems. CL encompasses natural language processing (NLP), machine translation, speech recognition, and text mining. The success of large language models (LLMs) like GPT-3 demonstrates the power of CL in tackling complex linguistic challenges, although ethical concerns surrounding bias and misinformation are increasingly prominent. A recent report by the AI Now Institute highlights the need for greater transparency and accountability in the development and deployment of LLMs.

Corpus Linguistics This data-driven approach uses large collections of naturally occurring language corpora to investigate language patterns and usage. Sophisticated software tools allow researchers to analyze vast amounts of text and speech data, revealing subtle variations in language use and providing empirical evidence for linguistic theories. The British National Corpus and the Corpus of Contemporary American English are prime examples of resources fueling corpus linguistic research.
